Imagine if a student spent as much time managing information as celebrities doted on dieting While eating too much food may be the basis of a moral panic about obesity excessive information is rarely discussed as a crisis of a similar scale Obviously plentiful and high quality food is not a problem if eating is balanced with exercise But without the skills of media and information literacy students and citizens wade through low quality online information that fills their day yet does not enable intellectual challenge imagination and questioning Digital Dieting From Information Obesity to Intellectual Fitness probes the social political and academic difficulties in managing large quantities of low quality information But this book does not diagnose a crisis Instead Digital Dieting provides strategies to develop intellectual fitness that sorts the important from the irrelevant and the remarkable from the banal In April 2010 and for the first time Facebook received more independent visitors than Google Increasingly there is a desire to share rather than search But what is the impact of such a change on higher education If students complain that the reading is too hard then one response is to make it easier If students complain that assignments are too difficult then one way to manage this challenge is to make the assignments simpler Both are passive responses that damage the calibre of education and universities in the long term Digital Dieting From Information Obesity to Intellectual Fitness provides active conscious careful and applicable strategies to move students and citizens from searching to researching sharing to thinking and shopping to reading     *Polish Your Star* Valerie L. *Design of a mobile phone-based Artificial Intelligence (AI) application to assess dietary intake and provide nudges to improve healthy eating choices: Formative research in Ghana and Vietnam* Braga, Bianca C.,Aberman, Noora-Lisa,Arrieta, Alejandra,Bannerman, Boateng,Burns, Adam,Folson, Gloria,Huynh, Phuong,Koch, Bastien,McCloskey, Pete,Nguyen, Phuong Hong,Zakariah-Akoto, Sawudatu,Hughes, David,Gelli, Aulo,2021-05-24 Background Low quality diets are a public health problem affecting individuals of all ages worldwide Nudging for Good NFG is a new research project aimed at developing validating and examining the feasibility of using artificial intelligence AI based technology to improve adolescent girls diets in urban Ghana and Vietnam Objectives Provide evidence to support the design of a new mobile phone intervention including a identifying the demand for mobile app to improve diets in adolescent girls b defining the intervention objectives and activities to be delivered via a mobile app and c assessing the potential for nudging functionality to be incorporated in the mobile app Methods This study used mixed methods including both literature and nutrition related app reviews as well as focus group discussions A literature review was conducted using PubMed and Google Scholar databases and intervention studies using technology to improve nutrition outcomes of adolescents were included Nine focus group discussions five in Ghana and four in Vietnam were undertaken with 61 girls to gauge smartphone and internet access and use and to obtain feedback on the prototype of a mobile app Results Nine studies met the selection criteria for the literature review including seven randomized control trials RCTs and two systematic reviews The evidence from the literature on how technology based nutrition interventions should be conducted and what should be the best outcomes of success was mixed Most of the 22 apps reviewed required manual entry of dietary information and recommended diets based on motivation to change body weight In the focus groups discussions the adolescents suggested modifications on the prototype of the mobile app we presented and indicated possibility to regularly take pictures of foods and beverages during meal time Conclusion We did not find an app available in either the Ghana or Vietnam markets that could improve dietary quality of adolescents without focusing on

weight Most apps available only had manual features to log food intake which is time consuming Moreover adolescents expressed interest in using a new modified version of the app we presented We aim at developing a new mobile phone application based on AI technology that gives personalized and reliable nutrition advice to improve adolescent girls diets However the literature review was not conclusive on what should be the characteristics of an app and how interventions to measure an app s impact on dietary quality should be conducted

Emerging Technologies to Promote and Evaluate Physical Activity Dan J Graham,James Aaron Hipp,Simon Marshall,Jacqueline Kerr,2014-10-23 Increasingly efforts to promote and measure physical activity are achieving greater precision greater ease of use and or greater scope by incorporating emerging technologies This is significant for physical activity promotion because more precise measurement will allow investigators to better understand where when and how physical activity is and is not occurring thus enabling more effective targeting of particular behavior settings Emerging technologies associated with the measurement and evaluation of physical activity are noteworthy because 1 Their ease of use and transferability can greatly increase external validity of measures and findings 2 Technologies can significantly increase the ability to analyze patterns 3 They can improve the ongoing systematic collection and analysis of public health surveillance due to real time capabilities associated with many emerging technologies 4 There is a need for research and papers about the cyberinfrastructure required to cope with big data multiple streams processing aggregation visualization etc and 5 Increasingly blurred boundaries between measurement and intervention activity e g the quantified self self tracking movement may necessitate a reevaluation of the conventional scientific model for designing and evaluating these sorts of studies There have been many recent disparate advances related to this topic Advances such as crowdsourcing allow for input from large diverse audiences that can help to identify and improve infrastructure for activity e g large group identification of environmental features that are conducive or inhibiting to physical activity on a national and even global scale Technologies such as Global Positioning Systems GPS and accelerometry are now available in many mobile phones and can be used for identifying and promoting activity and also understanding naturalistically occurring activity SenseCam and other personal visual devices and mobile apps provide person point of view context to physical activity lifestyle and timing Further multiple sensor systems are enabling better identification of types of activities like stair climbing and jumping that could not previously be identified readily using objective measures like pedometers or accelerometers in isolation The ability of activity sensors to send data to remote servers allows for the incorporation of online technology e g employing an online social network as a source of inspiration or accountability to

achieve physical activity goals and websites such as Stickk.com enable individuals to make public contracts visible to other users and also incorporate financial incentives and disincentives in order to promote behaviors including physical activity. In addition, the increasing use of active gaming, e.g., Wii, Xbox, Kinect in homes, schools, and other venues further underscores the growing link between technology and physical activity. Improvements in mathematical models and computer algorithms also allow greater capacity for classifying and evaluating physical activity, improving consistency across research studies.

Emerging technologies in the promotion and evaluation of physical activity is a significant area of interest because of its ability to greatly increase the amount and quality of global recorded measurements of PA patterns and its potential to more effectively promote PA. Emerging technologies related to physical activity build on our own and others' interdisciplinary collaborations in employing technology to address public health challenges. This research area is innovative in that it uses emerging resources including social media, crowdsourcing, and online gaming to better understand patterns of physical activity.
