Adapt and Be Adept Terry L. Anderson,2021-04-01 How can markets help us adapt to the challenges of climate change Editor Terry L Anderson brings together this collection of essays featuring the work of nine leading policy analysts who argue that market forces are just as important as government regulation in shaping climate policy and should be at the heart of our response to helping societies adapt to climate change Anderson notes in his introduction that most current climate policies such as the Paris Agreement require hard to enforce collective action and focus on reducing or mitigating greenhouse gases rather than adapting to their negative effects Adaptive actions can typically deliver much more faster and more cheaply than any realistic climate policy The authors tackle a range of issues the hidden costs of renewable energy sources the political obstacles surrounding climate change policy insurance and financial instruments for pricing risk of exposure to the effects of climate change and more Reliance on emerging renewable energies and a carbon tax are not enough to prevent the effects of global warming they argue We must encourage more private action and market incentives to adapt to a rapidly changing climate

Urban Governance in Southern Europe Abel Albet, 2016-02-11 The concept of governance has evolved into one of the most important but also controversial concepts in urban politics. While it encourages co-operation, participation and collective construction at the same time, it has brought about new forms of public demission, oligarchic regimes and less local democracy. The dilemmas accompanying these changes are particularly relevant when observing the cities of Southern Europe, whose socio-cultural specificities very much structure local political and policy materialisations. Bringing together a team of leading scholars from across the social sciences, this volume examines the issues of urban governance in the Southern European context. Illustrated by case studies of several main cities and metropolises on the North Mediterranean coast, it introduces and critically analyses the latest theories and approaches to urban governance. It questions how the real or socio-cultural notion of city seems to have been separated from that of the political city and explores how more integrated socio-political forms might be developed. It looks at current structures, dynamics and cultures of governance in urban development and questions whether they are well adapted to new realities and challenges or whether there are significant imbalances causing limited or fragmented political-administrative visions. By considering both the long Mediterranean history along with the recent but enduring global economic and political developments, this book argues that Southern European cities will have to depend greatly upon its own socio-cultural networks, dynamics and cosmopolitan evolution, making the most of the region's characteristic urban strengths as trading hubs with rich hinterlands and large and varied population.
