Current Ornithology Val Nolan Jr., Charles F. Thompson, 2012-12-06 Current Ornithology publishes authoritative up to date scholarly reviews of topics selected from the full range of current research in avian biology Topics cover the spectrum from the molecular level of organization to population biology and community ecology The series seeks especially to review 1 fields in which abundant recent literature will benefit from synthesis and organization 2 newly emerging fields that are gaining recognition as the result of recent discoveries or shifts in perspective and 3 fields in which students of vertebrates may benefit from comparisons of birds with other classes All chapters are invited and authors are chosen for their leadership in the subjects under review

Growth Vaclav Smil, 2020-12-08 A systematic investigation of growth in nature and society from tiny organisms to the trajectories of empires and civilizations Growth has been both an unspoken and an explicit aim of our individual and collective striving It governs the lives of microorganisms and galaxies it shapes the capabilities of our extraordinarily large brains and the fortunes of our economies Growth is manifested in annual increments of continental crust a rising gross domestic product a child's growth chart the spread of cancerous cells In this magisterial book Vaclav Smil offers systematic investigation of growth in nature and society from tiny organisms to the trajectories of empires and civilizations Smil takes readers from bacterial invasions through animal metabolisms to megacities and the global economy He begins with organisms whose mature sizes range from microscopic to enormous looking at disease causing microbes the cultivation of staple crops and

human growth from infancy to adulthood He examines the growth of energy conversions and man made objects that enable economic activities developments that have been essential to civilization Finally he looks at growth in complex systems beginning with the growth of human populations and proceeding to the growth of cities He considers the challenges of tracing the growth of empires and civilizations explaining that we can chart the growth of organisms across individual and evolutionary time but that the progress of societies and economies not so linear encompasses both decline and renewal The trajectory of modern civilization driven by competing imperatives of material growth and biospheric limits Smil tells us remains uncertain

Body Composition Henry C. Lukaski, 2017-07-20 Interest in the relationships between body structure and function in physical activity has persisted for centuries Body Composition Health and Performance in Exercise and Sport advances understanding beyond simple descriptions of body physique and composition of athletes and fills gaps in our understanding of the important role of muscle fat and bone in facilitating physical performance and health in sports and physically demanding occupations It addresses basic practical and applied topics in body composition performance and health with comprehensive reviews organized in four logical parts Body Composition Assessment Physical Activity and Body Composition Body Composition in Sports and Occupations and Moderating Factors This book integrates state of the art knowledge by international experts in the field and produces an evidence based practical guide for a balanced understanding of the role and use of body composition assessment in physical performance and health for youth and adults It also provides a needed link between the practice of body composition assessment and its application by members of public health advisory committees that develop national guidelines for diet physical activity and health This book is suitable for students and professionals in sports nutrition exercise science kinesiology and athletic training Sport administrators and policy makers for international and national sport federations and organizations and national intercollegiate and scholastic federations would also benefit from this book

Physiological Adaptations for Breeding in Birds Tony D. Williams, 2012-08-05 Physiological Adaptations for Breeding in Birds is the most current and comprehensive account of research on avian reproduction It develops two unique themes the consideration of female avian reproductive physiology and ecology and an emphasis on individual variation in life history traits Tony Williams investigates the physiological metabolic energetic and hormonal mechanisms that underpin individual variation in the key female specific reproductive traits and the trade offs between these traits that determine variation in fitness The core of the book deals with the avian reproductive cycle from seasonal gonadal development through egg laying and incubation to chick rearing Reproduction is considered in the context of the annual cycle and through an individual's entire life history The book focuses on timing of breeding clutch size egg size and egg quality and parental care It also provides a primer on female reproductive physiology and considers trade offs and carryover effects between reproduction and other life history stages In each chapter Williams describes individual variation in the trait of interest and the evolutionary context for trait variation He argues that there is only a rudimentary and in some cases

nonexistent understanding of the physiological mechanisms that underpin individual variation in the major reproductive life history traits and that research efforts should refocus on these key unresolved problems by incorporating detailed physiological studies into existing long term population studies generating a new synthesis of physiology ecology and evolutionary biology

Physiological Ecology William H. Karasov, Carlos Martínez del Río, 2020-05-05 Unlocking the puzzle of how animals behave and how they interact with their environments is impossible without understanding the physiological processes that determine their use of food resources But long overdue is a user friendly introduction to the subject that systematically bridges the gap between physiology and ecology Ecologists for whom such knowledge can help clarify the consequences of global climate change the biodiversity crisis and pollution often find themselves wading through an unwieldy technically top heavy literature Here William Karasov and Carlos Martínez del Río present the first accessible and authoritative one volume overview of the physiological and biochemical principles that shape how animals procure energy and nutrients and free themselves of toxins and how this relates to broader ecological phenomena After introducing primary concepts the authors review the chemical ecology of food and then discuss how animals digest and process food Their broad view includes symbioses and extends even to ecosystem phenomena such as ecological stoichiometry and toxicant biomagnification They introduce key methods and illustrate principles with wide ranging vertebrate and invertebrate examples Uniquely they also link the physiological mechanisms of resource use with ecological phenomena such as how and why animals choose what they eat and how they participate in the exchange of energy and materials in their biological communities Thoroughly up to date and pointing the way to future research *Physiological Ecology* is an essential new source for upper level undergraduate and graduate students and an ideal synthesis for professionals The most accessible introduction to the physiological and biochemical principles that shape how animals use resources Unique in linking the physiological mechanisms of resource use with ecological phenomena An essential resource for upper level undergraduate and graduate students An ideal overview for researchers

Functional and Evolutionary Ecology of Bats Akbar Zubaid, Gary F. McCracken, Thomas Kunz, 2006-01-05 Every three years a major international conference on bats draws the leading workers in the field to a carefully orchestrated presentation of the research and advances and current state of understanding of bat

biology Bats are the second most populous group of mammalia species after rodents and they are probably the most intensively studied group of mammals Virtually all mammalogists and a large proportion of organismic biologists are interested in bats The earlier two edited books deriving from previous bat research conferences as well as this one have been rigorously edited by Tom Kunz and others with all chapters subjected to peer review The resulting volumes published first by Academic Press and most recently by Smithsonian have sold widely as the definitive synthetic treatments of current scientific understanding of bats

Bird Ecology and Conservation William J. Sutherland, Ian Newton, Rhys Green, 2004-06-17 The aim of this book is to outline the main methods and techniques available to ornithologists A general shortage of information about available techniques is greatly hindering progress in avian ecology and conservation Currently this sort of information is disparate and difficult to locate with much of it widely dispersed in books journals and grey literature Sutherland and his editorial team bring together in a single authoritative source all the ornithological techniques the avian community will ever need For use by graduate students researchers and practising conservationists worldwide Bird Ecology and Conservation is the first title in a new series of practical handbooks which include titles focusing on specific taxonomic groups as well as those describing broader themes and subjects The series editor is William J Sutherland [Ecological and Environmental Physiology of Birds](#) J. Eduardo P. W. Bicudo, William A. Buttemer, Mark A. Chemical Signals in Vertebrates 15 Benoist Schaal,Diane Rekow,Matthieu Keller,Fabrice Damon,2023-10-16 The 15th Meeting on Chemical Signals in Vertebrates CSiV reunited participants from 20 countries from 5 continents who electronically commuted to Dijon France during three days 3 5 November 2021 This virtual meeting was a great opportunity to share information on how amphibians reptiles birds and mammals communicate through chemosignals and integrate their environment through chemical cues Scientists from varied disciplines ranging from biology and psychology to chemistry and biostatistics attended the meeting to share their research on how vertebrates produce and release chemical cues and signals how they detect discriminate process and interpret them how they respond to them behaviorally physiologically and or neurally in adaptive ways how the typical or atypical environment modulates such chemocommunication loops and chemoreception in general In total this 2021 CSiV meeting presented important new findings representative of the growing points in the rapidly expanding field of research on chemocommunication among vertebrates As appreciated by D M ller Schwarze a well known pioneer in the field and the founding father of the book series in question in his foreword to the meeting Our field has broadened to new horizons besides multicomponent cues we now

learn about multisource and multifunction chemical signals The range of study animals and settings has become richer and we have learned enough that practical applications are becoming realistic This proceedings documents key presentations from this virtual conference *Whale-watching* James Higham,Lars Bejder,Rob Williams,2014-03-27 A critical insight into the diverse socio cultural political economic and ecological contexts of the global whale watching industry The Evolution of Begging J. Wright,Marty L.
