Treatise on Geomorphology , 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the

state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

Investigating Landforms Lynn Van Gorp, 2007-09-21 Earths surface is always changing and scientists study landforms to learn about these changes Destructive forces like earthquakes and volcanoes are discussed as well as weathering and erosion from water runoffs Readers will learn about some of the most famous and majestic landforms in existence like the Canadian Rocky Mountains Angel Falls Mount Fuji and Columbia River Gorge through stunning images easy to read text fascinating sidebars and supporting glossary and index An engaging lab activity is featured to encourage readers to further explore how landforms occur

Representing Place Edward S. Casey, 2002-01-01 You are here a map declares but of course you are not any more than you truly occupy the vantage point into which a landscape painting puts you How maps and paintings figure and reconfigure space as well as our place in it is the subject of Edward S Casey s study an exploration of how we portray the world and its many places Casey s discussion ranges widely from Northern Sung landscape painting to nineteenth century American and British landscape painting and photography from prehistoric petroglyphs and medieval portolan charts to seventeenth century Dutch cartography and land survey maps of the American frontier From these culturally and historically diverse forays a theory of representation emerges Casey proposes that the representation of place in visual works be judged in terms not of resemblance but of reconnecting with an earth and world that are not the mere content of mind or language a reconnection that calls for the embodiment and implacement of the human subject Book jacket
