The Future of Post-Human History Peter Baofu, 2012-03-15 Is history really so universalistic even when similar events happen in different contexts that as George Santayana 1905 once famously wrote those who cannot remember the past are condemned to repeat it This more universalistic view of history can be contrasted with an opposing view which is more relativistic in orientation as shown by the equally known remark by Winston Churchill that history is written by the victor to the extent that what is regarded as true in history today may not be so in another era when a new victor comes into power THEX 2011 So which of the two views is correct here Contrary to these opposing views and other ideas as will be discussed in the book history in relation to both universality and relativity is neither possible or impossible nor desirable or undesirable to the extent that the respective ideologues on different sides would like us to believe Of course this challenge to the opposing views about history does not suggest that the study of history is controversial at best or that those fields related to the study of history like political science economics military studies anthropology sociology psychology philosophy theology literature ethics and so on should be rejected too Needless to say neither of these extreme views is reasonable Rather this book offers an alternative better way to understand the future of

history especially in the dialectic context of universality and relativity while learning from different approaches in the literature but without favoring any one of them or integrating them since they are not necessarily compatible with each other. Instead, this book offers a new theory that is the multifold theory of history to go beyond the existing approaches in a novel way. If successful, this seminal project is to fundamentally change the way that we think about history from the combined perspectives of the mind, nature, society, and culture with enormous implications for the human future and what the author originally called its post-human fate.

The Future Human Lee Harris, Regina Meredith, 2025-03-18

REVELATIONS FROM THE Z ABOUT WHAT LIES AHEAD: Humanity is facing an unprecedented phase of evolution, planetary revolution, and the acceleration of time. More and more people are seeking guidance as they wake up to a connection with something far bigger than what they were taught about human life. Channeled by Lee Harris and prompted by Regina Meredith's incisive questions, Lee's guides, the Z's, expose the lies promulgated throughout history and explain the past and the future, including why consciousness is driving you faster than your mind, the positive and negative effects of artificial intelligence and other technology on intellect and the brain, the changing landscape of relationships, sexuality, and self-awareness, why the next decade will be a genuinely revelatory time on Earth, why the most significant influencer in the development of humanity's new potential is you. The Z's remind us that everyone on Earth is being affected by the waves of higher consciousness now flooding the planet. Meant to be experienced, absorbed, and understood, the message from the Z's is unequivocal: creating a new world is your job. *The Future Human* tells you why and how.

Earth And The Human Future Kirk R

Smith, 2019-09-17 During the second half of the twentieth century, great changes have occurred in the natural sciences, spawned by the leap forward in physics during the war years and the growth in understanding of Earth's history and place in the cosmos. Also, with the new and terrible consequences of full-fledged war, the nuclear age has brought to the fore the new

Humans on Earth Filipe Duarte Santos, 2011-09-06 This is a wide-ranging and persuasive book written by an undisputed expert. Beginning with a broad history of the Universe, Earth, Life, and Man, it considers the origins and rise of science and technology before moving on to discuss the present state of the world and its possible futures. *Humans on Earth* then addresses the main challenges for social and economic development in the 21st century in the context of global change. It presents a detailed but non-technical analysis of questions relating to climate change, our dependence on fossil fuels, deforestation, loss of biodiversity, desertification, and air, water, soil, and ocean pollution, as well as problems related to overpopulation, poverty, social and economic inequalities, and conflict potential. The three main but largely mutually exclusive discourses on human development and the environment are described and discussed. The main emphasis is on the risks and uncertainties of the short-term future, the next 50 to 100 years, with regard to environmental degradation and the sustainability of our growth paradigm, a sweeping, thoughtful view of the role of humans in shaping our modern world.

Universe, Earth, Human Being Rudolf Steiner, 2022-10-31. The mission of our age is not to reproduce an ancient wisdom but to engender a new one, a wisdom that points not only to the past but that works prophetically into the future. Rudolf Steiner begins with ancient Egypt, the pyramids and sphinxes and a comparison of that epoch with our own. Rudolf Steiner surveys a vast spiritual landscape of human development. In symphonic style he describes the conquest of the physical plane in post-Atlantean civilizations, the relationships between the various cultural epochs, the human being's connections with the kingdoms of nature and the different planetary bodies and the relationship of animal forms to the physiognomy of human passions. Through this panoramic vision we discover how the changed conditions of human consciousness call for a new spiritual understanding today. In her Introduction Marie Steiner relates the special experience of being a member of Rudolf Steiner's audience for this timeless series of lectures. Enormous cosmic pictures were unfolded before the spiritual gaze of the listeners; insights were of such depths of ancient wisdom, views of distant futures of human and world development that deepest devotion flowed through their hearts. This new edition features a revised translation, introduction, notes and an index.

Future Earth Diana Dalbotten, Gillian Roehrig, Patrick Hamilton, 2014-06-23. Earth now is dominated by both biogeophysical and anthropogenic processes as represented in these two images from a simulation of aerosols. Dust, red from the Sahara, sweeps west across the Atlantic Ocean. Sea salt, blue, rises into the atmosphere from winds over the North Atlantic and from a tropical cyclone in the Indian Ocean. Organic and black carbon, green, from biomass burning is notable over the Amazon and Southeast Asia. Plumes of sulfate, white, from fossil fuel burning are particularly prominent over northeastern North America and East Asia. If present trends of dust emissions and fossil fuel burning continue in what we call the Anthropocene epoch, then we could experience high atmospheric CO₂ levels leading to unusual warming rarely experienced in Earth's history. This book focuses on human influences on land, ocean and the atmosphere to determine if human activities are operating within or beyond the safe zones of our planet's biological, chemical and physical systems. Volume highlights include: Assessment of civic understanding of Earth and its future; Understanding the role of undergraduate geoscience research and community-driven research on the Anthropocene; Effective communication of science to a broader audience that would include the public, the K-12 science community or populations underrepresented in the sciences; Public outreach on climate education, geoscience alliance and scientific reasoning. Future Earth is a valuable practical guide for scientists from all disciplines including geoscientists, museum curators, science educators and public policy makers. **The Crisis in Global**
