Earthmasters The Dawn Of The Age Of Climate Engineering:

Earthmasters Clive Hamilton, 2013-04-22 Looks at the effects climate change will have on Earth by the end of this century focusing on a collaboration between scientists and big business to develop advances in geoengineering so that humans can fight global warming

Geoengineering Earth's Climate Jennifer Swanson, 2017-08-01 Most scientists agree that Earth is warming rapidly. Glaciers are melting and rising seawaters are submerging islands and coastal cities. In the coming decades millions will likely have to escape extreme weather caused by climate change. Some scientists say we need to act faster and with radical new technologies now to save our planet. They propose geoengineering or engineering Earth to reset our global thermostat. Ideas include thickening clouds with chemicals to reduce the amount of sunlight and pulling carbon dioxide from the air with machines. However critics say that geoengineering could backfire and create even worse weather. Is geoengineering too risky? Or is it our best hope of survival?

Just Technology Thomas Siller, Gearold Johnson, 2025-03-17 The readers of the book *Just Technology: The Quest for Cultural, Economic, Environmental and Technical Sustainability* Second Edition will benefit from its systematic approach in evaluating the true sustainability challenges facing society and will learn how to address these challenges in a just manner. Since the publication of the first edition of the book the concept of a just society has become more important. Several new contemporary examples are now included to reinforce the concepts introduced in the previous edition. The book presents a framework to evaluate the appropriateness of technological approaches to address critical sustainable issues. The framework comprises four questions that aim to create more just approaches by broadening the context engineers consider when formulating solutions. Addressing the complexity of today's global challenges requires new ways of thinking. The idea that technology is always the best, maybe the only approach needs to be reconsidered and sustainable approaches must also draw from nontechnological areas.

Geoengineering our Climate? Jason J. Blackstock, Sean Low, 2018-09-04 If the detrimental impacts of human induced climate change continue to mount technologies for geoengineering our climate i.e. deliberate modifying of the Earth's climate system at a large scale are likely to receive ever greater attention from countries and societies worldwide. Geoengineering technologies could have profound ramifications for our societies and yet agreeing on an international governance framework in which even serious research into these planetary altering technologies can take place presents an immense international political challenge. In this important book a diverse collection of internationally respected scientists, philosophers, legal scholars, policymakers and civil society representatives examine and reflect upon the global geoengineering debate they have helped shape. Opening with essays examining the historic origins of contemporary geoengineering ideas the book goes on to explore varying perspectives from across the first decade of this global discourse since 2006. These essays methodically cover the practical and ethical dilemmas geoengineering poses, the evolving geoengineering research agenda, the challenges geoengineering technologies present to current international legal and political frameworks and differing perceptions of geoengineering from

around the world The book concludes with a series of forward looking essays some drawing lessons from precedents for governing other global issues others proposing how geoengineering technologies might be governed if as they begin to emerge from the lab into the real world This book is an indispensable resource for scientists activists policymakers and political figures aiming to engage in the emerging debate about geoengineering our climate Geoengineering Discourse Confronting Climate Change Brynna Jacobson,2022-07-07 Geoengineering the idea of addressing climate change through large scale technological projects stands out among contested technologies in the degree to which its scope of possibilities and its premise are characterized by global existential risks Despite controversy this field has been shifting toward mainstream consideration Geoengineering Discourse Confronting Climate Change The Move from Margins to Mainstream in Science News Media and Politics examines the trajectory of geoengineering through critical discourse analysis of three key genres science policy reports news journalism and congressional hearings Brynna Jacobson explores how reports from distinguished scientific societies have constructed certain notions of legitimacy around geoengineering how narratives within news coverage have reflected and shaped the public discourse and understanding of geoengineering and how geoengineering has garnered political support from both major political parties in the United States Through analysis of discursive conventions within these genres the author reveals the evolution of notions of normalcy legitimacy and imperative around the field of geoengineering The Unconstructable Earth Frédéric Neyrat,2018-10-16 Winner Grand Prize French Voices Award for Excellence in Publication and Translation The Space Age is over Not at all A new planet has appeared Earth In the age of the Anthropocene the Earth is a post natural planet that can be remade at will controlled and managed thanks to the prowess of geoengineering This new imaginary is also accompanied by a new kind of power geopower that takes the entire Earth in its social biological and geophysical dimensions as an object of knowledge intervention and governmentality In short our rising awareness that we have destroyed our planet has simultaneously provided us not with remorse or resolve but with a new fantasy that the Anthropocene delivers an opportunity to remake our terrestrial environment thanks to the power of technology Such is the position we find ourselves in when proposals for reengineering the earth s ecosystems and geosystems are taken as the only politically feasible answer to ecological catastrophe Yet far from being merely the fruit of geo capitalism this new grand narrative of geopower has also been activated by theorists of the constructivist turn ecomodernist postenvironmentalist accelerationist who have likewise called into question the great divide between nature and culture With the collapse of this divide a cyborg hybrid flexible nature has been built an impoverished nature that does not exist without being performed by technologies that proliferate within the space of human needs and capitalist imperatives Underneath this performative vision resides a hidden anaturalism denying all otherness to nature and the Earth no longer by externalizing it as a thing to be dominated but by radically internalizing it as something to be digested Constructivist ecology thus finds itself in no position to confront the geoconstructivist project with its claim that there is no

nature and its aim to replace Earth with Earth 2.0 Against both positions Neyrat stakes out the importance of the unconstructable Earth Against the fusional myth of technology over nature but without returning to the division between nature and culture he proposes an ecology of separation that acknowledges the wild subtractive capacity of nature Against the capitalist technocratic delusion of earth as a constructible object but equally against an organicism marked by unacknowledged traces of racism and sexism Neyrat shows what it means to appreciate Earth as an unsubstitutable becoming a trajectory that cannot be replicated in a laboratory Underway for billions of years withdrawing into the most distant past and the most inaccessible future Earth escapes the hubris of all who would remake and master it This remarkable book which will be of interest to those across the humanities natural sciences and social sciences from theorists to shapers of policy recasts the earth as a singular trajectory that invites humans to turn political ecology into a geopolitics

Steering Human Evolution Yehezkel Dror, 2020-05-07 Humanity must steer its evolution As human knowledge moves a step ahead of Darwin's theories this book presents the emergence of human made meta evolution shaping our alternative futures This novel process poses fateful challenges to humanity which require regulation of emerging science and technology which may endanger the future of our species However to do so successfully a novel humanity craft has to be developed main ideologies and institutions need redesign national sovereignty has to be limited a decisive global regime becomes essential some revaluation of widely accepted norms becomes essential and a novel type of political leader based on merit in addition to public support is urgently needed Taking into account the strength of nationalism and vested interests it may well be that only catastrophes will teach humanity to metamorphose into a novel epoch without too high transition costs But initial steps such as United Nation reforms are urgent in order to contain calamities and may soon become feasible Being both interdisciplinary and based on personal experience of the author this book adds up to a novel paradigm on steering human evolution It will be of great interest to scholars and researchers of modern history evolution sciences future studies political science philosophy of action and science and technology It will also be of wide appeal to the general reader anxious about the future of life on Earth Comments on the Corona pandemic add to the book's concrete significance

T&T Clark Handbook of Christian Theology and Climate Change Hilda P. Koster, Ernst M. Conradie, 2019-12-12 The T these essays are critically engaged by respondents situated in other geographic regions minority communities non Christian traditions or non theological disciplines Structured in seven main parts the handbook explores 1 the need for collaboration with disciplines outside of Christian theology to address climate change 2 the need to find common moral ground for such collaboration 3 the difficulties posed by collaborating with other Christian traditions from within 4 the questions that emerge from such collaboration for understanding the story of God's work and 5 God's identity and character 6 the implications of such collaboration for ecclesial praxis and 7 concluding reflections examining whether this volume does justice to issues of race gender class other animals religious diversity geographical divides and carbon mitigation This rich ecumenical cross cultural

Ecology and Power in the Age of Empire Corey Ross,2017-03-31 Ecology and Power in the Age of Empire provides the first wide ranging environmental history of the heyday of European imperialism from the late nineteenth century to the end of the colonial era It focuses on the ecological dimensions of the explosive growth of tropical commodity production global trade and modern resource management transformations that still visibly shape our world today and how they were related to broader social cultural and political developments in Europe s colonies Covering the overseas empires of all the major European powers Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place but were an essential part of the colonial project profoundly shaping the imperial enterprise even as they were shaped by it The story he tells is not only about the complexities of human experience but also about people s relationship with the ecosystems in which they were themselves embedded the soil water plants and animals that were likewise a part of Europe s empire Although it shows that imperial conquest rarely represented a sudden bout of ecological devastation it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and environmental issues that we face in the twenty first century world

Routledge Handbook of Environmental Conflict and Peacebuilding Ashok Swain,Joakim Öjendal,2018-04-17 The past two decades have witnessed the emergence of a large body of research examining the linkage between environmental scarcity violent conflict and cooperation However this environmental security polemic is still trying to deliver a well defined approach to achieving peace Studies are being undertaken to find the precise pathways by which cooperative actions are expected not only to pre empt or moderate resource conflicts but also to help diffuse cooperative behaviour to other disputed issues The recognition that environmental resources can contribute to violent conflict accentuates their potential significance as pathways for cooperation and the consolidation of peace in post conflict societies Conceived as a single and reliable reference source which will be a vital resource for students researchers and policy makers alike the Routledge Handbook of Environmental Conflict and Peacebuilding presents a wide range of chapters written by key thinkers in the field organised into four key parts Part I Review of the concept and theories Part II Review of thematic approaches resources scarcity intervention adaptation and peacebuilding Part III Case studies Middle East Iraq Jordan Liberia Nepal Colombia Philippines Part IV Analytical challenges and future oriented perspectives Enabling the reader to find a concise expert review on topics that are most likely to arise in the course of conducting research or policy making this volume presents a truly global overview of the key issues and debates in environmental conflict and peacebuilding

Geoengineering is the deliberate and large scale intervention in the Earth s climate system in an attempt to mitigate the adverse effects of global warming Now that a climate emergency is upon us claims that geoengineering is inevitable are rapidly proliferating How did we get into this What options make it onto the table Which are left out Whom does geoengineering serve These are some of the questions that the thinkers contributing to this volume are exploring

Ecomodernism: Technology, Politics and The Climate Crisis Jonathan Symons,2019-07-09 Is climate catastrophe inevitable In a world of extreme inequality rising nationalism and mounting carbon emissions the future looks gloomy Yet one group of environmentalists the ecomodernists are optimistic They argue that technological innovation and universal human development hold the keys to an ecologically vibrant future However this perspective which advocates fighting climate change with all available technologies including nuclear power synthetic biology and others not yet invented is deeply controversial because it rejects the Green movement s calls for greater harmony with nature In this book Jonathan Symons offers a qualified defence of the ecomodernist vision Ecomodernism he explains is neither as radical or reactionary as its critics claim but belongs in the social democratic tradition promoting a third way between laissez faire and anti capitalism Critiquing and extending ecomodernist ideas Symons argues that states should defend against climate threats through transformative investments in technological innovation A good Anthropocene is still possible but only if we double down on science and humanism to push beyond the limits to growth Climate Change Mark Maslin,2014 In the new edition of Climate Change A Very Short Introduction previously titled Global Warming Mark Maslin explores all of the key debates Examining the most recent scientific research he looks what climate change is its impact on our planet and why it s such a complex problem to solve **Climate** Mark Maslin,2013-06-27 In this wide ranging Very Short Introduction to climate Mark Maslin considers all aspects of the global climate system exploring and explaining the different components that control climate on Earth He considers the processes that allow energy to reach the Earth and how it is redistributed around the planet by the ocean atmosphere system the relationship and differences between climate and the weather how climate has affected life on Earth and human settlements and the cyclic and quasi cyclic features of climate such as the Milankovitch cycles and El Nino He concludes by touching on the issue of climate change and outlines some of the approaches that are now being taken to tackle it ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **The Human Age: The World Shaped By Us** Diane Ackerman,2014-09-10 Winner of the National

Outdoor Book Award and the PEN New England Henry David Thoreau Prize A dazzling inspiring tour through the ways that humans are working with nature to try to save the planet With her celebrated blend of scientific insight clarity and curiosity Diane Ackerman explores our human capacity both for destruction and for invention as we shape the future of the planet Earth Ackerman takes us to the mind expanding frontiers of science exploring the fact that the natural and the human now inescapably depend on one another drawing from fields as diverse as evolutionary robotics nanotechnology 3 D printing and biomimicry New York Times Book Review with probing intelligence a clear eye and an ever hopeful heart **The 2051 Munich Climate Conference** Benno Heisel,Büro Grandezza e.V.,Theresa Spielmann,Christina Wehl,2023-05-09 In September 2021 a very special academic conference took place T2051MCC The 2051 Munich Climate Conference Researchers from across the academic spectrum assembled to discuss climate change What made it special was that everyone held their lecture as if it took place in an imagined year 2051 The theatre collective Büro Grandezza had released an open call for contributions to a conference in Munich Almost 50 researchers wrote papers on climate narratives geoengineering coastal adaptation and other topics This particular framework allowed them to break out of the constraints of the current discourse without neglecting methodology or thematic sharpness *Climate Change Solutions* Diana Stuart,Ryan Gunderson,Brian Petersen,2020-07-17 Climate Change Solutions represents an application of critical theory to examine proposed solutions to climate change Drawing from Marx s negative conception of ideology the authors illustrate how ideology continues to conceal the capital climate contradiction or the fundamental incompatibility between growth dependent capitalism and effectively and justly mitigating climate change Dominant solutions to climate change that offer minor changes to the current system fail to address this contradiction However alternatives like degrowth involve a shift in priorities and power relations and can offer new systemic arrangements that confront and move beyond the capital climate contradiction While there are clear barriers to a systemic transition that prioritizes social and ecological well being such a transition is possible and desirable Decarbonisation and the Energy Industry Tade Oyewunmi,Penelope Crossley,Frédéric Gilles Sourgens,Kim Talus,2020-11-26 This timely collection of essays examines the legal and regulatory dynamics of energy transitions in the context of emerging trends towards decarbonisation and low carbon energy solutions The book explores this topic by considering the applicable energy law and policy frameworks in both i highly industrialised and major economies such as the US EU China and Australia ii resource rich developing countries such as Nigeria and regions like Southern Africa Comprising 16 chapters the book delves into the tradeoffs and regulatory complexities of carbon constraints in conventional energy supply systems while maintaining a reliable and secure energy system that is equally sustainable ie decarbonised It highlights the importance of ensuring affordable access to energy services in developing economies as the energy transitions unfold and explores the potentials of emerging technologies such as hydrogen networks power to gas and Carbon Capture and Storage Additionally the book also considers the international investment law implications of energy

decarbonisation Focusing on the nexus between law regulation and institutions it adopts a contextual approach to examine how and to what extent institutions can effectively facilitate more reliable sustainable and secure energy supply systems in the twenty first century This book portrays the conventional hydrocarbon based energy supply industry in a largely international and interconnected context It highlights the costs benefits and losses that may arise as the transition towards decarbonisation unfolds depending on the pathways and solutions adopted With chapters written by leading experts in energy law and policy the reader friendly style and engaging discussions will benefit an international audience of policymakers academics students and advisers looking for a more incisive understanding of the issues involved in energy transitions and the decarbonisation of energy systems Climate Terror Sanjay Chaturvedi,2016-01-12 Climate Terror engages with a highly differentiated geographical politics of global warming It explores how fear inducing climate change discourses could result in new forms of dependencies domination and militarised climate security
