Consumption and Waste Carl A. Zimring, William L. Rathje, Consulting Editor, 2012-02-27 Archaeologists and anthropologists have long studied artifacts of refuse from the distant past as a portal into ancient civilizations but examining what we throw away today tells a story in real time and becomes an important and useful tool for academic study Trash is studied by behavioral scientists who use data compiled from the exploration of dumpsters to better understand our modern society and culture Why does the average American household send 470 pounds of uneaten food to the garbage can on an annual basis How do different societies around the world cope with their garbage in these troubled environmental times How does our trash give insight into our attitudes about gender class religion and art The Encyclopedia of Consumption and Waste explores the topic across multiple disciplines within the social sciences and ranges further to include business consumerism environmentalism and marketing to comprise an outstanding reference for academic and public libraries

Design and Construction of Bioclimatic Wooden Greenhouses, Volume 4 Gian Luca Brunetti, 2023-01-25 This book is the fourth of four dealing with bioclimatic design and construction by focusing on the most basic and polyvalent of modern environmental systems the bioclimatic greenhouse the Swiss army chainsaw of architecture More specifically this fourth volume focuses on architectural integration environmental prediction and how to simulate and structurally size a bioclimatic wooden greenhouse In more general terms it helps us to consider how to design and build the structure of bioclimatic low energy architecture with low environmental impact This multi volume book covers both free standing greenhouses that can naturally heat and cool themselves and lean to greenhouses that support the natural heating and cooling of buildings this includes both agricultural greenhouses and greenhouses suited to host people As a result it is a trans disciplinary work deriving its areas of concern from a broad range of study areas spanning from environmental to constructional to structural drawing the clarity of the approach from the fact that the topics are presented by a single author with a single voice and a designer s mindset To achieve this the book adopts a composite set of explanatory strategies and communication registers including extensive support by 3D construction drawings and examples and presents not only state of the art solutions but also experimental ones

Dwelling in Resistance Chelsea Schelly, 2017-08-02 Most Americans take for granted much of what is materially involved in the daily rituals of dwelling In *Dwelling in Resistance* Chelsea Schelly examines four alternative U S communities The Farm Twin Oaks Dancing Rabbit and Earthships where electricity water heat waste food and transportation practices differ markedly from those of the vast majority of Americans Schelly portrays a wide range of residential living alternatives utilizing renewable small scale decentralized technologies These technologies considerably change how individuals and communities interact with the material world their natural environment and one another Using in depth interviews and compelling ethnographic observations the book offers an insightful look at different communities practices and principles and their successful endeavors in sustainability and self sufficiency

Healing Appalachia Albert J. Fritsch, Paul Gallimore, 2007-05-11 *Healing Appalachia* is the first book to apply appropriate technology or the simplest level of technology that can effectively achieve the desired result specifically to the Appalachian region The authors examine thirty low cost people friendly and environmentally benign appropriate technologies that are concerned with such issues as food preservation land use shelter and transportation They pay close attention to the practicality of each technique according to

affordability ease of use and ecological soundness Details on construction and maintenance and resources for locating further information are included making this an essential volume for everyone who cares about the future of Appalachia

Sustainable Architecture: William Van Zyl,2018 *The Greening of Everyday Life* John M. Meyer,Jens

Kersten,2016-09-05 *The Greening of Everyday Life* develops a distinctive new way of talking about environmental concerns in post industrial society It brings together several conceptual frameworks with a diversity of case studies and practical examples of efforts to orient everyday material practices toward greater sustainability The volume builds upon internal criticisms of dominant strands of contemporary environmentalism in post industrial societies and develops a new approach which emerges from a number of disciplines but is unified by a normative concern for the material objects and practices familiar to members of societies in their everyday lives In exploring alternatives the chapter authors utilize conceptual frameworks rooted in environmental justice new materialism and social practice theory and apply it to the everyday attention to urban biodiversity infrastructure for storm water run off green home remodelling household toxicity community gardens and farmers markets bicycling and automobility alternative technologies and more With contributions from leading international and emerging scholars this volume critically explores specific strategies and actions taken to generate homes communities and livelihoods that might be scaled up to promote more sustainable societies *Putting Sustainability into Practice* Emily Huddart Kennedy,Maurie J. Cohen,Naomi Krogman,2015-12-18 *Putting Sustainability into Practice* offers a robust and interdisciplinary understanding of contemporary consumption routines that challenges conventional approaches to social change premised on behavioral economics and social psychology Empirical research is featured from eight different countries using both qualitative and quantitative data to support its thesis *A Critical History of Contemporary Architecture* Elie G. Haddad,David Rifkind,2016-12-05 1960 following as it did the last CIAM meeting signalled a turning point for the Modern Movement From then on architecture was influenced by seminal texts by Aldo Rossi and Robert Venturi and gave rise to the first revisionary movement following Modernism Bringing together leading experts in the field this book provides a comprehensive critical overview of the developments in architecture from 1960 to 2010 It consists of two parts the first section providing a presentation of major movements in architecture after 1960 and the second a geographic survey that covers a wide range of territories around the world This book not only reflects the different perspectives of its various authors but also charts a middle course between the aesthetic histories that examine architecture solely in terms of its formal aspects and the more ideological histories that subject it to a critique that often skirts the discussion of its formal aspects

Elemental Architecture Phillip James Tabb,2018-10-31 *Elemental Architecture* presents a new and refreshing approach to sustainable architectural practice Going beyond the standard performance based and quantitative sustainable measures it incorporates a broader framework of considerations including the more poetic and noetic possibilities of environmental design The book is structured around the ancient Greek and medieval alchemists system of the Five Temperaments fire earth

air water and ether Phillip James Tabb examines how these elements produce both positive and negative environmental forces which have an impact on architectural design from drinking water and fresh air to torrential floods and tornados He shows how responding to or enhancing these forces can help us to create a more sustainable healthy and purposeful architecture To illustrate this each chapter draws on seminal contemporary works of architecture from Peter Zumthor s Bruder Klaus Field Chapel to Frank Lloyd Wright s masterpiece at Fallingwater These examples are accompanied by over a hundred high quality illustrations Expanding the discussion of sustainability to include phenomenological as well as qualitative considerations Elemental Architecture is ideal for students and researchers with an interest in sustainable architecture and architectural theory *The Greening of Architecture* Phillip James Tabb,A. Senem Deviren,2017-03-02

Contemporary architecture and the culture it reflects dependent as it is on fossil fuels has contributed to the cause and necessity of a burgeoning green process that emerged over the past half century This text is the first to offer a comprehensive critical history and analysis of the greening of architecture through accumulative reduction of negative environmental effects caused by buildings urban designs and settlements Describing the progressive development of green architecture from 1960 to 2010 it illustrates how it is ever evolving and ameliorated through alterations in form technology materials and use and it examines different places worldwide that represent a diversity of cultural and climatic contexts The book is divided into seven chapters with an overview of the environmental issues and the nature of green architecture in response to them followed by an historic perspective of the pioneering evolution of green technology and architectural integration over the past five decades and finally providing the intransigent and culturally pervasive current examples within a wide range of geographic territories The greening of architecture is seen as an evolutionary process that is informed by significant world events climate change environmental theories movements in architecture technological innovations and seminal works in architecture and planning throughout each decade over the past fifty years This time period is bounded on one end by the awareness of environmental problems beginning in the 1960 s the influential texts by Rachel Carson E F Schumacher Buckminster Fuller and Steward Brand and the impact of the OPEC Oil Embargo of 1973 and on the other end the pervasiveness of the necessary greening of architecture that includes systemic reforms in architectural and urban design land use planning transportation agriculture and energy production found in the 2000 s The greening process moves from remediation to holistic models of architecture Geographical landscapes give a global account of the greening process where some examples are parallel and sympathetic and others are in clear contrast to one another with very individuated approaches Certain events like the Rio Summit in 1992 and Kyoto Protocol in 1997 and themes such as the Hannover Principles in 2000 provide a dynamic ideological critique as well as a formal and technical discussion of the embodied and accumulative content of greening principles in architecture *Build it with Bales* Matts Myhrman,S. O. MacDonald,1997
