Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Have you ever heard a siren on a moving ambulance, fire truck, or police car? If so, what happens to the sound as the vehicle passes by?

Sometimes when cars are passing I usually hear the car running and sometimes I hear the horn of the car.

The change in the sound that you hear is called the **Doppler shift**.

Gizmo Warm-up

The **Doppler Shift** Gizmo illustrates why the Doppler shift occurs. The Gizmo shows a vehicle that emits **sound waves** and an observer who will hear the sounds.

1. Click the **PLAY SAMPLE** button (). (Check that the Gizmo's sound and your computer's speakers are on.)

What do you hear?

I hear a police siren

2. Click Play () and observe the sound waves emitted from the moving car. Click Pause () and compare the sound waves in front of and behind the car. What do you notice?

Something that I notice is the length between them is about 900cm

3. Use the Ruler to measure the **wavelength**, or the distance between the lines, of the waves in front of and behind the car. (Note: The red circles represent every thousandth wave.)

Wavelength in front of car: 600 cm

Wavelength behind car: 900 cm

Why do you think the waves in front of the car have a shorter wavelength than the waves behind the car? I think that the reason that the front is shorter than the back is because the car is chasing the waves and the waves in the back are running away from the car.

expertise in optical science and engineering will appreciate the value of the content by reading the book backward starting from Ch 12 which explains the critical thinking methodology besides giving a very brief summary of the contents in the previous chapters Establishes that abandoning the wave particle duality actually allows us to extract more realities out of quantum mechanics Illustrates how the discovery of the NIW property profoundly impacts several branches of fundamental physics including Doppler effect and hence the cosmological red shift Summarizes that many ad hoc hypotheses from physics can be removed a la Occam's razor while improving the reality and comprehension of some of the current working theories Demonstrates that our persistent attempts to restore causality in physical theories will be guided by our capability to visualize the invisible light matter interaction processes that are behind the emergence of all measurable data Draws close attention to the invisible but ontological interaction processes behind various optical phenomena so we can emulate them more efficiently and knowledgeably in spite of limitations of our theories Designed as a reference book for general physics and philosophy this optical science and engineering book is an ideal resource for optical engineers physicists and those working with modern optical equipment and high precision instrumentation
