Chips 2020 Vol 2 New Vistas In Nanoelectronics The Frontiers Collection:

CHIPS 2020 VOL. 2 Bernd Höfflinger, 2015-09-19 The release of this second volume of CHIPS 2020 coincides with the 50th anniversary of Moore's Law a critical year marked by the end of the nanometer roadmap and by a significantly reduced annual rise in chip performance At the same time we are witnessing a data explosion in the Internet which is consuming 40% more electrical power every year leading to fears of a major blackout of the Internet by 2020 The messages of the first CHIPS 2020 published in 2012 concerned the realization of quantum steps for improving the energy efficiency of all chip functions With this second volume we review these messages and amplify upon the most promising directions ultra low voltage electronics nanoscale monolithic 3D integration relevant data brain and human vision inspired processing and energy harvesting for chip autonomy The team of authors enlarged by more world leaders in low power monolithic 3D video and Silicon brains presents new vistas in nanoelectronics promising Moore like exponential growth sustainable through to the 2030s

The Reality of Time Flow Richard T. W. Arthur, 2019-04-25 It is commonly held that there is no place for the now in physics and also that the passing of time is something subjective having to do with the way reality is experienced but not with the way reality is Indeed the majority of modern theoretical physicists and philosophers of physics contend that the passing of time is incompatible with modern physical theory and excluded in a fundamental description of physical reality This book provides a forceful rebuttal of such claims In successive chapters the author explains the historical precedents of the modern opposition to time flow giving careful expositions of matters relevant to becoming in classical physics the special and general theories of relativity and quantum theory without presupposing prior expertise in these subjects Analysing the arguments of thinkers ranging from Aristotle Russell and Bergson to the proponents of quantum gravity he contends that the passage of time understood as a local becoming of events out of those in their past at varying rates is not only compatible with the theories of modern physics but implicit in them

The Seneca Effect Ugo Bardi, 2017-08-22 The essence of this book can be found in a line written by the ancient Roman Stoic Philosopher Lucius Annaeus Seneca Fortune is of sluggish growth but ruin is rapid This sentence summarizes the features of the phenomenon that we call collapse which is typically sudden and often unexpected like the proverbial house of cards But why are such collapses so common and what generates them Several books have been published on the subject including the well known Collapse by Jared Diamond 2005 The collapse of complex societies by Joseph Tainter 1998 and The Tipping Point by Malcolm Gladwell 2000 Why The Seneca Effect This book is an ambitious attempt to pull these various strands together by describing collapse from a multi disciplinary viewpoint The reader will discover how collapse is a collective phenomenon that occurs in what we call today complex systems with a special emphasis on system dynamics and the concept of feedback From this foundation Bardi applies the theory to real world systems from the mechanics of fracture and the collapse of large structures to financial collapses famines and population collapses the fall of entire civilizations and the most dreadful collapse we can imagine that of the planetary

ecosystem generated by overexploitation and climate change The final objective of the book is to describe a conclusion that the ancient stoic philosophers had already discovered long ago but that modern system science has rediscovered today If you want to avoid collapse you need to embrace change not fight it Neither a book about doom and gloom nor a cornucopianist s dream The Seneca Effect goes to the heart of the challenges that we are facing today helping us to manage our future rather than be managed by it

NANO-CHIPS 2030 Boris Murmann, Bernd Hoefflinger, 2020-08-28 In this book a global team of experts from academia research institutes and industry presents their vision on how new nano chip architectures will enable the performance and energy efficiency needed for AI driven advancements in autonomous mobility healthcare and man machine cooperation Recent reviews of the status quo as presented in CHIPS 2020 Springer have prompted the need for an urgent reassessment of opportunities in nanoelectronic information technology As such this book explores the foundations of a new era in nanoelectronics that will drive progress in intelligent chip systems for energy efficient information technology on chip deep learning for data analytics and quantum computing Given its scope this book provides a timely compendium that hopes to inspire and shape the future of nanoelectronics in the decades to come
