Economic Theory of Bank Credit L. Albert Hahn, 2015-10-08 L. Albert Hahn published the first edition of the Economic Theory of Bank Credit in 1920 and a radically revised third edition in 1930 Economic Theory of Bank Credit is a clear exposition of a theory of credit and stands in the tradition of Harley Withers Henry Macleod and Knut Wicksell A theory of credit recognizes that banks are not only intermediaries of savings but in fact create money themselves This idea is paired with a detailed account of the technical processes of the banking sector In Part Two Hahn provides an economic account of the effects of credit creation on the economy banks vary their credit creation activity for various reasons and cause fluctuations in overall economic activity Hahn therefore develops a monetary theory of the business cycle in the spirit of Schumpeter The first and third editions draw different conclusions about central bank policy The first edition is optimistic that an ever lasting boom could be achieved whilst the third edition sees the core function of central bank policy as smoothing economic fluctuations This edition translated into English for the first time enables the reader to revisit this classic contribution to monetary theory It features a complete translation of the first edition key elements of the third edition and a new introduction by Professor Harald Hagemann

Governance and Accountability of Financial Institutions Jonas Abraham Akuffo, 2021-01-06 The presence of sound corporate governance in a financial institution is important in maintaining the confidence of both the market and the public. The power that corporate governance holds over the success of some of the largest financial institutions in the world is not to be downplayed. This book methodically assesses the quality of corporate governance and mechanisms of accountability disclosures to various stakeholders. It is further intended to provide fresh insights into some specific corporate governance recommendations to help improve good governance in financial institutions particularly in the United Kingdom and the EU but will also be applicable to other major economies. It explores what, when and how corporate governance has changed the financial institution functions and corporate executive behaviour by critically reviewing the pre and post financial crisis theoretical and empirical literature. Increasingly driven by the nature of complications, complexities and opacity in the operations of financial systems, corporate governance reporting plays an important role in the financial sector. It will provide insights into corporate governance disclosures over a long term basis. This book should be a valuable asset to support the research of practitioners, students and all academics due to its stimulating and reflective insights into this fascinating topic.

Money, Financial Institutions and Macroeconomics Avi Cohen, Harald Hagemann, John Smithin, 2012-12-06 Money, Financial Institutions and Macroeconomics presents a comparative and international perspective on the current state of research in monetary theory and the application of monetary theory to important policy issues. The main emphasis is on views stressing the importance of credit creation in the monetary process in a tradition which arguably encompasses Wicksell, the later Swedes and the Austrians through the later Hicks, the circuit school and contemporary post Keynesians. In addition, however, there are distinguished contributions from economists with a more mainstream approach to the issues. The book is subdivided into four main parts. Part I reviews the theory of a monetary and credit economy. Part II explores alternative views on money and credit. Part III deals with monetary policy issues in North America and Part IV discusses monetary policy issues in Europe. Taken together, the contributions to this volume certainly bear out Hick's famous adage about the much closer relationship between monetary theory and monetary history than is the case in other branches of economic thought.

What Drives the Performance of Selected MENA Banks? A Meta-Frontier Analysis Hichem Ben-Khedhiri, Barbara Casu, Mr. Sami Ben Naceur, 2011-02-01 This study examines the effect of financial sector reform on bank performance in selected Middle Eastern and North African MENA countries in the period 1994-2008. We evaluate bank efficiency in Egypt, Jordan, Morocco, Lebanon and Tunisia by means of Data Envelopment Analysis (DEA) and we employ a meta-frontier approach to calculate efficiency scores in a cross-country setting. We then employ a second-stage regression to investigate the impact of institutional, financial and bank-specific variables on bank efficiency. Overall, the analysis shows that despite similarities in the process of financial reforms undertaken in the five MENA countries, the observed efficiency levels of banks vary substantially across markets, with Morocco consistently outperforming the rest of the region. Differences in technology seem to be crucial.

in explaining efficiency differences To foster banking sector performance policies should be aimed at giving banks incentives to improve their risk management and portfolio management techniques Improvements in the legal system and in the regulatory and supervisory bodies would also help to reduce inefficiency
