Fuzzy Stochastic Optimization Shuming Wang,Junzo Watada,2012-03-20 In 2014 winner of Outstanding Book Award by The Japan Society for Fuzzy Theory and Intelligent Informatics Covering in detail both theoretical and practical perspectives this book is a self contained and systematic depiction of current fuzzy stochastic optimization that deploys the fuzzy random variable as a core mathematical tool to model the integrated fuzzy random uncertainty It proceeds in an orderly fashion from the requisite theoretical aspects of the fuzzy random variable to fuzzy stochastic optimization models and their real life case studies The volume reflects the fact that randomness and fuzziness or vagueness are two major sources of uncertainty in the real world with significant implications in a number of settings In industrial engineering management and economics the chances are high that decision makers will be confronted with information that is simultaneously probabilistically uncertain and fuzzily imprecise and optimization in the form of a decision must be made in an environment that is doubly uncertain characterized by a co occurrence of randomness and fuzziness This book begins by outlining the history and development of the fuzzy random variable before detailing numerous optimization models and applications that include the design of system controls for a dam Computational Intelligence in Reliability Engineering

Fuzzy-Like Multiple Objective Decision Making Jiuping Xu, Xiaoyang Zhou, 2011-01-15. Decision makers usually face multiple conflicting objectives and the complicated fuzzy-like environments in the real world. What are the fuzzy-like environments? How do we model the multiple objective decision making problems under fuzzy-like environments? How do you deal with these models? In order to answer these questions, this book provides an up-to-date methodology system for fuzzy-like multiple objective decision making which includes modelling, system model analysis, system algorithm, system and application system in structure optimization, problem selection, problem purchasing, problem inventory, problem logistics, problem and so on. Researchers, practitioners and students in management science, operations research, information science, system science and engineering science will find this work a useful reference.
