The Psychobiology of Trauma and Resilience Across the Lifespan Douglas L. Delahanty, 2008-09-05 Research has suggested that childhood experiences confer risk/resilience for reactions to trauma in adulthood, and predictors and correlates of posttraumatic stress disorder (PTSD) appear to differ developmentally. Research in PTSD has typically been conducted by either child or adult researchers with relatively little overlap or communication between the two camps. Developmental models of PTSD are necessary to fully understand the complex constellation of responses to trauma across the lifespan. Such models can inform study designs and lead to novel developmentally appropriate interventions. To this end, this book is organized in such a way as

to present and integrate research into child adult and older adult trauma samples in an attempt to culminate in a testable model of PTSD risk and resilience across the lifespan Each author incorporates a developmental slant to their individual chapter and the chapters are organized to highlight potential differences in our understanding of risk and resiliency between children and adults Initial chapters concerning pre and peri traumatic risk factors for PTSD lead into chapters reviewing specific risk and resilience factors in adults and children Additional chapters focus on the impact of childhood trauma on adult functioning and the biology of PTSD in children adults and older adults As PTSD rarely occurs in a pure form specific chapters focus on the impact of comorbid disorders in our understanding of PTSD and the final chapters consider both psychosocial and pharmacological treatments for PTSD in children and adults

Bioethics and the Brain Walter Glannon,2006-11-09 Our ability to map and intervene in the structure of the human brain is proceeding at a very quick rate Advances in psychiatry neurology and neurosurgery have given us fresh insights into the neurobiological basis of human thought and behavior Technologies like MRI and PET scans can detect early signs of psychiatric disorders before they manifest symptoms Electrical and magnetic stimulation of the brain can non invasively relieve symptoms of obsessive compulsive disorder depression and other conditions resistant to treatment while implanting neuro electrodes can help patients with Parkinsons and other motor control related diseases New drugs can help regenerate neuronal connections otherwise disrupted by schizophrenia and similar diseases All these procedures and drugs alter the neural correlates of our mind and raise fascinating and important ethical questions about their benefits and harms They are in a sense among the most profound bioethical questions we face since these techniques can touch on the deepest aspects of the human mind free will personal identity the self and the soul This is the first single author book on what has come to be known as neuroethics Walter Glannon uses a philosophical framework that is fully informed by cutting edge neuroscience as well as contemporary legal cases such as Terri Schiavo to offer readers an introduction to this fascinating topic He starts by describing the state of the art in neuroscientific research and treatment and gives the reader an up to date picture of the brain Glannon then looks at the ethical implications of various kinds of treatments such as whether or not brain imaging will end up changing our views on free will and moral responsibility whether patients should always be told that they are at future risk for neurological diseases if erasing unconscious emotional memories implicated in depression can go too far if forcing behavior modifying drugs or surgery on violent offenders can ever be justified the implications of drugs that enhance cognitive abilities and how to define brain death

and the criteria for the withdrawal of life support While not exhaustive Glannons work addresses a wide range of fascinating issues and his pathbreaking work should appeal to philosophers psychiatrists neurologists neurosurgeons radiologists psychologists and bioethicists **Stahl's Illustrated Anxiety, Stress, and PTSD** Stephen M.
