Textbank Systems Erhard Mergenthaler,2013-06-29 Psychoanalysis and information science are two disciplines that twenty years ago hardly anyone would have considered closely related with regard either to persons or subject matter The cooperation between the two fields was made possible on the one hand by the development of information science from a technological discipline to a theoretically founded scientific discipline and on the other by the development of psychoanalysis from a hermetically closed special discipline to an open and empirical science This study reports the successful inclusion of information science as an instrument of research on the psychoanalytic process This direction of work

was initiated by Donald Spence and Hartvig Dahl from the Research Institute of Mental Health New York at the end of the 1960s. H. Thom, H. K. Chele and their research group in Ulm must be credited with having adopted Spence's programs as early as 1974 at that time the programs even had to be implemented far away on the IBM computer at the University of Heidelberg. The efforts to expand computer aided content analysis to a method for process research led in 1975 to the acquisition of the Hamburg program for Electronic Verbal Analysis EVA. In the following years the author of this study revised, extended and supplemented the EVA to create the Ulm version. This book now describes another step in the integration of information technology in fundamental research in psychoanalysis.
