

Top comments on CMG

"The well capabilities in all of our three simulators are very similar. Differences occur when a capability doesn't apply to that simulator (e.g. steam injection is not relevant for **IMEX**, a **black-oil, isothermal simulator**). Additionally the grid capabilities are very similar. Therefore, **injectivity modeling** and **hydraulic fracture model** can be carried out in **all three simulators**.

The **choice of simulator** to use is determined by the **reservoir fluids** and the fluids injected. E.g. **water** or **dry gas injection** can be modeled in **IMEX**, but **GEM** would be need for **volatile oil** or **condensate reservoirs**, or **CO2 injection** in **depleted oil** or **saline aquifers** for sequestration. For most **thermal applications** you would need to run **STARS**.

Production from **hydraulic fractured** reservoirs is usually modeled in **IMEX** or **GEM** depending on whether or not multicomponent effects, such as adsorption, are important.

Papers SPE 132093, SPE 122530 are a couple of references you can look at the describe modeling of fractured shale reservoirs using CMG software. General Manager European Region CMG"
