

Microlog® CMXA 50

Portable Data Collector/ FFT Analyzer

*SKF's newest addition to it's line of
portable data collectors/analyzers*

The Microlog® CMXA 50 is a robust alternative for plants seeking to arm plant personnel with an easy to operate, feature-rich data collection and analysis tool. For novice to advanced users, the "50" bridges the gap between a high powered, comprehensive analysis solution such as the Microlog® CMVA 60, and the simplified MARLIN line of Personal Data Assistants for operator use. The CMXA 50's price point and functionality make it an essential addition to your existing system.

The CMXA 50 Microlog is SKF's newest addition to it's line of portable data collectors/analyzers. A two-channel, route-based instrument, the unit is small, lightweight and rugged. The CMXA 50 fits in one hand, weighs only 1.6 pounds, and yet is rated for a 2 meter (6.6 feet) drop. It collects, stores and trends vibration and process data, including enveloped acceleration – with 4 selectable input filters for enhanced bearing and gear mesh fault detection.

The CMXA 50 may be operated easily with minimal training or vibration analysis expertise. Context sensitive, onboard help is accessible with the press of a button.

Those responsible for machinery monitoring in plants where highly skilled vibration analysts are at a premium or staffing levels leave minimal time for training, will find the CMXA 50 a welcome addition, enabling them to optimize their existing reliability resources.

The Microlog CMXA 50 is the logical choice for plants in pursuit of a world-class program where engineering, reliability, condition monitoring, maintenance and operations personnel work together to improve asset efficiency and achieve greater plantwide reliability.

The CMXA 50 works with SKF Machine Analyst™, the Asset Efficiency Optimization™ software, and PRISM® for Windows for storage, advanced analysis and plantwide reporting.

SPEED, ACCURACY AND ENHANCED ANALYSIS

The new Microlog's excellent data quality is the result of a spurious-free dynamic range of 90 dB, which dramatically enhances its capacity for detecting and identifying problems faster and more accurately. The speed of data collection is greatly enhanced because digital signal processing occurs at a 40 kHz real time rate, thanks to a Motorola 24-bit DSP processor. Multi-point automation further improves data collection efficiency with the capability to collect and process up to 12 measurement parameters per point at the press of a button. An internal multiplexer provides built-in support for tri-axial data collection as well.

The CMXA 50's maximum frequency range is 40,000 Hz, making the CMXA 50 an excellent choice for high speed gear and bearing fault detection. FFT resolution is 12,800 lines, enabling dramatically improved data displays and the capability to isolate and identify spectral components where two peaks are confusingly close.
