bestselling dictionary has been fully revised making it the most up to date and authoritative reference of its kind Providing comprehensive coverage of computer applications in industry school work education and the home it is the ideal reference for students professionals and anyone who uses computers Parallel Computers 2 R.W Hockney, C.R Jesshope, 2019-08-16 Since the publication of the first edition parallel computing technology has gained considerable momentum A large proportion of this has come from the improvement in VLSI techniques offering one to two orders of magnitude more devices than previously possible A second contributing factor in the fast development of the subject is commercialization The supercomputer is no longer restricted to a few well established research institutions and large companies A new computer breed combining the architectural advantages of the supercomputer with the advance of VLSI technology is now available at very attractive prices A pioneering device in this development is the transputer a VLSI processor specifically designed to operate in large concurrent systems *Parallel Computers 2 Architecture Programming and Algorithms* reflects the shift in emphasis of parallel computing and tracks the development of supercomputers in the years since the first edition was published It looks at large scale parallelism as found in transputer ensembles This extensively rewritten second edition includes major new sections on the transputer and the OCCAM language The book contains specific information on the various types of machines available details of computer architecture and technologies and descriptions of programming languages and algorithms Aimed at an advanced undergraduate and postgraduate level this handbook is also useful for research workers machine designers and programmers concerned with parallel computers In addition it will serve as a guide for potential parallel computer users especially in disciplines where large amounts of computer time are regularly used

Mathematical Foundations of Computer Science 1986 Jozef Gruska, Branislav Rován, Juraj Wiedermann, 1986-08-01 Scientific and Technical Aerospace Reports, 1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **Memristor Computing Systems** Leon O. Chua, Ronald Tetzlaff, Angela Slavova, 2022-06-23 This contributed volume offers practical solutions and design modeling and implementation related insights that address current

research problems in memristors memristive devices and memristor computing The book studies and addresses related challenges in and proposes solutions for the future of memristor computing State of the art research on memristor modeling memristive interconnections memory circuit architectures software simulation tools and applications of memristors in computing are presented Utilising contributions from numerous experts in the field written in clear language and illustrated throughout this book is a comprehensive reference work Memristor Computing Systems explains memristors and memristive devices in an accessible way for graduate students and researchers with a basic knowledge of electrical and control systems engineering as well as prompting further research for more experienced academics *StarBriefs 2001*, 2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions **Content Addressable Parallel Processors** Caxton C. Foster, 1976 Content addressable memories or content addressable parallel processors or associative memories or associative processors have been around the computing scene for almost 20 years now Several hundred papers have been written discussing their use and design but so far no single text or reference book has tried to summarize the field This volume attempts to remedy this lack It attempts to gather into one place all the information that exists as of late 1975

VLSI Systems and Computations H.T. Kung, R. Sproull, G. Steele, 2012-12-06 The papers in this book were presented at the CMU Conference on VLSI Systems and Computations held October 19 21 1981 in Pittsburgh Pennsylvania The conference was organized by the Computer Science Department Carnegie Mellon University and was partially supported by the National Science Foundation and the Office of Naval Research These proceedings focus on the theory and design of computational systems using VLSI Until very recently integrated circuit research and development were concentrated in the device physics and fabrication design disciplines and in the integrated circuit industry itself Within the last few years a community of researchers is growing to address issues closer to computer science the relationship between computing structures and the physical structures that implement them the specification and verification of computational processes implemented in VLSI the use of massively parallel computing made possible by VLSI the design of special purpose computing architectures and the changes in general purpose computer architecture that VLSI makes possible It is likely that the future exploitation of VLSI technology depends as much on structural and design innovations as on advances in fabrication technology The book is divided into nine sections Invited Papers Six distinguished researchers from industry and academia presented invited papers Models of Computation The papers in this section deal with abstracting the properties of VLSI circuits into models that can be used to analyze the chip area time or energy required for a particular computation

Sparse Distributed Memory Pentti Kanerva,1988 Motivated by the remarkable fluidity of memory the way in which items are pulled spontaneously and effortlessly from our memory by vague similarities to what is currently occupying our attention Sparse Distributed Memory presents a mathematically elegant theory of human long term memory The book which is self contained begins with background material from mathematics computers and neurophysiology this is followed by a step by step development of the memory model The concluding chapter describes an autonomous system that builds from experience an internal model of the world and bases its operation on that internal model Close attention is paid to the engineering of the memory including comparisons to ordinary computer memories Sparse Distributed Memory provides an overall perspective on neural systems The model it describes can aid in understanding human memory and learning and a system based on it sheds light on outstanding problems in philosophy and artificial intelligence Applications of the memory are expected to be found in the creation of adaptive systems for signal processing speech vision motor control and in general robots Perhaps the most exciting aspect of the memory in its implications for research in neural networks is that its realization with neuronlike components resembles the cortex of the cerebellum Pentti Kanerva is a scientist at the Research Institute for Advanced Computer Science at the NASA Ames Research Center and a visiting scholar at the Stanford Center for the Study of Language and Information A Bradford Book
