Krishnamachari, L.J. Broutman, 2013-11-27 This book is a product of the understanding I developed of stress analysis applied to plastics while at work at L J Broutman and Associates UBA and as a lecturer in the seminars on this topic co sponsored by UBA and Society of Plastics Engineers I believe that by its extent and level of treatment this book would serve as an easy to read desktop reference for professionals as well as a text book at the junior or senior level in undergraduate programs The main theme of this book is what to do with computed stress To approach the theme effectively I have taken the stress category approach to stress analysis Such an approach is being successfully used in the nuclear power field In plastics this approach helps in the prediction of long term behavior of structures To maintain interest I have limited derivations and proofs to a minimum and provided them if at all as flow charts In this way I believe that one can see better the connection between the variables
