Agriculture Handbook, 2017 Forensic Approaches to Buried Remains John Hunter, Barrie Simpson, Caroline Sturdy Colls, 2013-08-28. The field of forensic archaeology has developed over recent years from being a branch of conventional archaeology into a well-established discipline in its own right. *Forensic Approaches to Buried Remains* takes an innovative approach to the subject by placing the role of the forensic archaeologist within the wider forensic environment; it identifies new areas of interdisciplinary research and practice and evaluates practical difficulties. The authors see this book as a reflection of the subject's development and as a knowledge base for the next generation of forensic archaeologists. Areas covered include Search logistics integration and specialist search scenarios; Levels of confidence in site search and elimination; Urban and rural landscape reconstruction in both short and long term cases; The integration of cadaver dogs and earth moving machinery; The recovery of multiple evidence types; Sampling strategies; spatial relevance and dating; Multiple burial scenarios. As part of the Essential Forensic Science book series, this book will provide students and practitioners alike with an invaluable resource outlining both the major developments in the discipline as well as original approaches to the search for and recovery of buried remains.

Grading for Landscape Architects and Architects Peter Petschek, 2012-11-05. The contour line is the only precise and accurate means for representing the free and natural formation of terrain in the plan, so learn to use this instrument. Professor Hans Loidl, Landscape Architect and Teacher. The two design elements of landscape architecture are plants and terrain. While the subject of vegetation is well documented by numerous publications, there is a lack of technical literature in the field of grading. This volume fills that gap. History, forms of terrain, basic principles, digital modeling, slope reinforcement systems, construction site implementation and practical examples all are treated in detail by the author. Short problems systematically organized and arranged in increasing order of difficulty enable the reader to apply what he or she has learned. The exercises are suitable for self-study. Together with the large amount of practical information provided by the book, they also enable architects to become familiar with grading as an important design element of landscape architecture.
