 Mobility Mathias Mitteregger, Emilia M. Bruck, Aggelos Soteropoulos, Andrea Stickler, Martin Berger, Jens S. Dangschat, Rudolf  
 Scheuven, Ian Banerjee, 2023-03-29 The subject of this open access publication is the impact of connected and automated  
 vehicles on the European city and the conditions under which this technology can make a positive contribution to urban  
 development The authors put forward two theses that have received little attention in the scientific discourse so far  
 Connected and automated vehicles will not become fully established in all sub areas of the city for a long time As a result  
 previously assumed effects from traffic safety to traffic performance as well as spatial effects will have to be reevaluated To  
 ensure a positive contribution of this technology to the mobility of the future transport and settlement policy regulations  
 must be further developed Established territorial institutional and organizational boundaries need to be challenged in a  
 timely manner Despite or because of the existing great uncertainties we are at the beginning of a phase of yet shaping the  
 possible future in technology development but also in politics urban planning administration and civil society Description of  
 the chapters 1 Connected and automated driving The long level 4 Mathias Mitteregger reflects on the road ahead for  
 automated driving What pathways of technological development induce which kind of spatial effects and planning needs 2  
 Connected and automated driving Consideration of the local spatial context and spatial differentiation Emilia M Bruck and  
 Aggelos Soteropoulos reflect on the importance of the local context when classifying and estimating the effects of different  
 forms of automated mobility 3 Connected and automated driving in the context of a sustainable transport and mobility  
 transformation Andrea Stickler Jens S Dangschat and Ian Banerjee integrate possible potentials of automated mobility in the  
 context of a transformed sustainable transport system PART I Mobility and transport 4 Self driving turnaround or automotive  
 continuity Reflections on technology innovation and social change Katharina Manderscheid reflects on how differing visions  
 of an automated future can be understood with regard to divergent interests in technological development 5 Automated  
 drivability and streetscape compatibility in the urban rural continuum using the example of Greater Vienna Aggelos  
 Soteropoulos analyses how different street spaces align with technological requirements of automated mobility creating a  
 suitability framework for road spaces in the Greater Vienna region 6 Automation public transport and Mobility as a Service  
 Experience from tests with automated shuttle buses The authors show what types of automated public transport might be  
 used in the future and what can be learned from testing automated shuttle buses in the past 7 Delivery robots as a solution

for the last mile in the city Bert Leerkamp Aggelos Soteropoulos and Martin Berger describe how automated delivery robots could be contextualized in terms of solving last mile problems and discuss what implications might lie ahead for urban planning

PART II Public space

8 Control and design of spatial mobility interfaces The authors identify the possible implications of automated mobility for mobility interfaces and explore how public spaces could be transformed

9 Transformations of European public spaces with AVs Robert Martin Emilia M Bruck and Aggelos Soteropoulos use the example of Copenhagen to show how public spaces could be transformed in an age of automated urban mobility and benefit from lower car dependency

10 At the end of the road Total safety Mathias Mitteregger discusses how the desire for road safety affects public spaces and how automated mobility influences this discourse

11 Integration of cycling into future urban transport structures with connected and automated vehicles Looking at the future of mobility Lutz Eichholz and Detlef Kurth show that the bike actually offers solutions to many of our current problems and that planning should not forget to integrate cycling into future urban transport structures and systems

12 Against the driverless city Steven Fleming argues for a radical shift in cities towards a highly improved cycling infrastructure eradicating the need for automated mobility

Part III Spatial development

13 Strategic spatial planning smart shrinking and the deployment of CAVs in rural Japan Ian Banerjee and Tomoyuki Furutani show where automated mobility could help tackle pressing issues in rural Japan

14 Integrated strategic planning approaches to automated transport in the context of the mobility transformation The authors show how new forms of automated mobility could be integrated into mobility systems in diverse spatial structures in the city region of Vienna with the overriding goal of the mobility transformation

15 Opportunities from past mistakes Land potential en route to an automated mobility system Looking at the mistakes made in building a car centric environment in the past Mathias Mitteregger and Aggelos Soteropoulos identify future areas of urban transformation as a result of a lower demand for car centric infrastructures and businesses

Part IV Governance

16 New governance concepts for digitalization Challenges and potentials Alexander Hamedinger contextualizes the manifold paths towards an automated future with regard to governance and describes how governance concepts might need to adapt in the future

17 How are automated vehicles driving spatial development in Switzerland Fabienne Perret and Christof Abegg show how automated vehicles are influencing spatial development in Switzerland focusing on three different scenarios on the road ahead

18 Lessons from local transport transition projects for connected and automated transport Andrea Stickler looks at local projects aiming at a transformation of mobility practices and reflects on implications for automated transport

19 Connected and automated transport in the socio technical transition Jens S Dangschat looks at societal transformations in the past and contextualizes automated mobility in terms of a possible socio technical transition ahead

20 Data driven urbanism digital platforms and the planning of MaaS in times of deep uncertainty What does it mean for CAVs Ian Banerjee Peraphan Jittrapirom and Jens S Dangschat show how continuous digitalization in cities might affect possible uses and implementations of CAVs and their accompanying systems
