

5 STEPS FOR DISASTER PREPAREDNESS

An important aspect of an EHS leader's job is to be prepared for what happens when external disasters strike. These could include anything from natural disasters like floods or earthquakes, cybersecurity issues or power outages, or even space weather emergencies. It is the responsibility of leadership to know how to handle these situations and instruct their workforces accordingly.

PROGRAM MANAGEMENT

Leaders should organize, develop, and administer the preparedness program, and identify regulations that establish minimum program requirements. Ready.gov, which has resources from the DHS and FEMA, offers the Ready Business Program with toolkits designed specifically for each kind of hazard, along with resources to help businesses implement their programs.

PLANNING

Employers should gather information about hazards, assess risks, conduct a business impact analysis (BIA), and examine ways to prevent hazards and reduce risks. Employers should take an "all hazards" approach, meaning the plan should be applicable to as many different types of threats and hazards as possible.

IMPLEMENTATION

EHS managers should form a preparedness plan that covers resource management, emergency response, crisis communications, business continuity, information technology, employee assistance, incident management, and training.

TESTING AND EXERCISES

Leaders should define different types of testing exercises, learn to conduct them, and use the results to evaluate effectiveness. Testing and exercises will help employees understand their roles in disaster situations and reinforce their knowledge of procedures, facilities, systems, and equipment.

PROGRAM IMPROVEMENT

At this point, employers should be able to identify when the preparedness programs need to be reviewed, discover methods to evaluate the preparedness program, and utilize the review to make the necessary changes. All reviews and improvement should be documented, and any vulnerabilities found should be recorded and addressed through a corrective action program.

Facing the Unexpected Ronald W. Perry, Michael K. Lindell, Kathleen J. Tierney, 2001-11-06 Facing the Unexpected presents the wealth of information derived from disasters around the world over the past 25 years. The authors explore how these findings can improve disaster programs, identify remaining research needs, and discuss disaster within the broader context of sustainable development. How do different people think about disaster? Are we more likely to panic or to respond with altruism? Why are 110 people killed in a ValuJet crash considered disaster victims while the 50 000 killed annually in traffic accidents in the U S are not? At the crossroads of social, cultural, and economic factors, this book examines these and other compelling questions. The authors review the influences that shape the U S governmental system for disaster planning and response, the effectiveness of local emergency agencies, and the level of professionalism in the field. They also compare technological versus natural disaster and examine the impact of technology on disaster programs.
