

DISASTER PREPAREDNESS TIPS

DO'S AND DONT'S

Never assume and underestimate the extent of disaster.
(e.g. the flood will never reach the second floor; the fire is too far away from my house; the typhoon is only signal no.2).

Don't get carried away by rumors and/or do not spread rumors.
Only rely on verified information from legitimate sources.

Obey orders from the
authorities / government.

When disaster strikes,
don't panic. Stay calm.

Stay focused to keep
your senses alert and
functioning.

Before helping
someone, make sure
that you yourself is safe
and capable to do so.

Lives and safety should be prioritized above anything
else. Don't worry about material possessions which can
be replaced, however, valuable they may be.

Disaster Planning Guide What To Do Before During And After Disasters:

Disaster Planning Guide Paolo Jose De Luna, 2015-10-13 From house fires up to earthquakes tsunamis and flash floods there s no telling what these disasters can do to us and when they occur They put lives at risk and they damage properties from thousands up to millions of dollars in the damage they wrought Disasters can occur at any place any time and to anyone No one has the ability to predict when and where these disasters will occur And that s why the best measure that you can do is to prepare for them As you may already have known preparation is always stressed out in a variety of guides and disaster management plans However these so called plans are easily thrown out of the box when the disasters truly strike What makes these plans so flawed and confusing that a lot of people just end up panicking Well that s because most guides on disaster just make up generic preparation measures without having any specific details on each one If you re going to prepare for a disaster you need a thorough and concrete plan that you can use to prepare May it be for a fire or for a flood you need to know on what to do to protect your family your friends and your loved ones You also need to minimize the damage to your home and to save whatever you can in order to move on after the disaster has struck But aside from the preparation phase for a disaster you also need to know on what to do during the disaster itself Will you give in to the fear while a fire rages on or if you re stranded on your home s roof while an intense storm has caused immense levels of floods Or will you compose yourself and follow the steps that you need to do in order to survive the disaster as well as protecting other people That s ultimately up to you And then there s the post disaster measures that you need to do Most people often get confused on what to do in order to recover after a disaster has struck A lot of people just end up crying or moping after everything that they ve owned has been destroyed or worse their homes have been wrecked apart after a hurricane But are those really the things that you should think about right at this moment Will you just stand there and wallow in despair or will you stand up and fight in order to get back what you ve lost In this book you ll be learning on how to deal with disasters Right from the beginning you ll learn on how to properly prepare for a disaster what are the things that you need to prepare what to do during a disaster and up to what to do in order to rest recover and recuperate after the disaster has subsided In order for you to survive a disaster you need to be prepared not just before a disaster but for all three of these phases You ll be presented with various facts about disasters and disaster management as well as real life scenarios that you can utilize in order to survive various kinds of disasters like house fires floods tsunamis earthquakes blizzards blackouts and more

Disaster Preparedness Association of Research Libraries, 1993 Most librarians know the importance of disaster preparedness Many disasters could have been prevented altogether or have had reduced impact if institutions had been better prepared This resource guide suggests how disaster preparedness can be achieved at cultural institutions Twenty three basic resource articles are presented to introduce disaster preparedness They deal with the safety of collections rather than the safety of staff and related issues such as security and environmental control are not addressed Of the materials that

cover what to do once a disaster has occurred most emphasize water damage because so many causes of disaster result in water damage The resource guide is supplemented by a list of 23 selected readings When a choice had to be made between a readily available source and one that was difficult to obtain the hard to obtain one was included in the resource guide and a reference to the other was provided in the bibliography The basic processes for disaster preparedness include 1 brainstorming potential disasters 2 investigating responses to past disasters 3 outlining a disaster plan 4 determining remaining needs and 5 developing recommendations SLD **Disaster Planning Guidelines for Fire Chiefs** ,1981
