

The background of the entire cover is a high-magnification microscopic image of neural tissue. It features a dense network of neurons and axons, with various components highlighted by bright, multi-colored fluorescent dyes in shades of red, green, blue, and yellow. The overall texture is complex and organic, typical of biological specimens viewed under a fluorescence microscope.

Mechanistic Criminology K. Ryan Proctor, Richard E. Niemeyer, 2019-05-23 The science of criminology is at a crossroads Despite accumulating a dizzying array of facts about crime the field has yet to identify a body of theories that allows for the adequate prediction explanation and control of phenomena of central interest to criminologists *Mechanistic Criminology* locates this problem within the field s failure to conform to the expectations of scientific fields and reliance on antiquated methods of theory construction The authors contend that this failure has resulted in an inability of criminologists to engage in theory falsification and competition two central activities of science that produce the forms of reliable knowledge that are unique to scientific fields *Mechanistic Criminology* advocates for the adoption of a mechanistic mode of theorizing to allow criminologists to engage in theory falsification and competition and ignite rapid scientific discovery in the field The proposed method is the same one employed within the biological sciences which is responsible for their rapid scientific progress in the late twentieth and early twenty first centuries Should criminologists adopt this mechanistic approach criminology could experience the same scientific revolution that is occurring in the biological sciences

and criminologists would generate the knowledge necessary for the prediction explanation and control of crime **Health Psychology** Regan A. R. A. R.
