The Oxford Handbook of Group and Organizational Learning

Linda Argote, John M. Levine, 2020-01-02 Groups and organizations vary dramatically in their ability to learn. Some acquire substantial knowledge as a function of experience while others do not. In groups, learning can occur at the level of the individual member and/or the group as a whole. In organizations, learning can occur at both of these levels as well as that of the wider collective. Besides varying in the amount and kind of information they acquire, groups and organizations also vary regarding their success in retaining knowledge and transferring it to other units. In general, groups and organizations that are proficient in acquiring, retaining, and transferring knowledge are more productive and more enduring than their less able counterparts. The goal of this handbook is to bring together cutting-edge theoretical and empirical work on group and organizational learning by leading scholars from several disciplines. Because many of the same processes influence learning in groups and organizations, including both kinds of learning in the same volume has the potential to facilitate the integration of knowledge and the cross-fertilization of ideas. These benefits are reciprocal in that research at the group level can shed light on how organizations learn, whereas research at the organizational level can illuminate how groups learn. By clarifying similarities and differences in the processes that underlie learning in groups and organizations, the handbook advances understanding of the causes and consequences of learning in collectives of varying size and complexity. Discovery and Design Turab Lookman, Stephan Eidenbenz, Frank Alexander, Cris Barnes, 2018-09-22 This book addresses the current status, challenges, and future directions of data-driven materials discovery and design. It presents the analysis and learning from data as a key theme in many science and cyber-related applications. The challenging open questions as well as future directions in the application of data science to materials problems are sketched. Computational and experimental facilities today generate vast amounts of data at an unprecedented rate. The book gives guidance to discover new knowledge that enables materials innovation to address grand challenges in energy, environment, and security. The clearer link needed between the data from these facilities and the theory and underlying science. The role of inference and optimization methods in distilling the data and constraining predictions using insights and results from theory is key to achieving the desired goals of real-time analysis and feedback. Thus, the importance of this book lies in emphasizing that the full value of knowledge-driven discovery using data can only be realized by integrating statistical and information sciences with materials science, which is increasingly dependent on high-throughput and large-scale computational and experimental data-gathering efforts. This is especially the case as we enter a new era of big data in materials science with the planning of future experimental facilities such as the Linac Coherent Light Source at Stanford, LCLS II, the European X-ray Free Electron Laser (XFEL), and MaRIE Matter Radiation in Extremes, the signature concept facility from Los Alamos National Laboratory. These facilities are expected to generate hundreds of terabytes to several petabytes of in situ, spatially and temporally resolved data per sample.

The questions that then arise include how we can learn from the data to accelerate the processing and analysis of reconstructed microstructure rapidly map spatially resolved properties from high throughput data devise diagnostics for pattern detection and guide experiments towards desired targeted properties The authors are an interdisciplinary group of leading experts who bring the excitement of the nascent and rapidly emerging field of materials informatics to the reader

Human-Centered Agile Joe Montalbano,Brad Lehman,2023-08-23 This book is a guide on how to apply Human Centered Design HCD practices to an Agile product development model that is used widely throughout industry and government where it is applied primarily to software and technology development efforts This has been an ongoing industry challenge due to the fact that HCD prioritizes time spent understanding the problems to be solved time spent in the problem space while Agile prioritizes a fast hypothesize and deliver model time spent in the solution space Organizations that attempt an Agile transformation abandon it either because it was too difficult or because it did not deliver the hoped for results At the same time efforts to improve the design and experience of their products using Human Centered Design have a tendency to fall short because it can be difficult to see the ROI of design efforts even while companies like McKinsey document design driven successes What s more a company that successfully adopts Agile often seems to have an even harder time implementing HCD and vice versa This is particularly disappointing since Agile and HCD should be mutually supportive In practice Agile teams often bypass HCD efforts in favor of finishing their goals and thinking they are doing well only to have their work product fail to meet the actual end user s needs At first the team will become indignant We followed the expert guidance of our Product Owner the Voice of the Customer they will say followed by but it met all of the Acceptance Criteria they should love it It s a failure of Agile that this type of sub optimal delivery happens so regularly and predictably The fact that team responses can be so accurately predicted in advance by those who ve seen this movie many times before point to a process failure or inefficiency that is widespread and desperately needs to be addressed Alternatively teams will invest too heavily in up front discovery efforts that slow down delivery to an unacceptable point often while also failing to capture research based findings in a way that matures the overall strategic product or portfolio understanding The cost of misfiring goes far beyond a bad delivery or an angry customer Decreased team morale drives poorer future performance cost turnover if left unchecked more cost and non productive blame sessions that lead to degraded faith in the Agile product development model itself This book

identifies solutions based on successful methods of integrating HCD practices by phase into an ongoing agile delivery model from the discovery through implementation and evaluation including key success factors for an HCD Agile engagement approach critical points of delivery and strategies for integrating HCD into teams based on the existing design maturity of an organization or product team
