## **Discrete Event Simulation For Health Technology Assessment:**

*Discrete Event Simulation for Health Technology Assessment* J. Jaime Caro, Jörgen Möller, Jonathan Karnon, James Stahl, Jack Ishak, 2015-10-16 This is the first book to make all the central concepts of discrete event simulation relevant for health technology assessment Accessible to beginners the book requires no prerequisites and describes the concepts with as little jargon as possible It presents essential concepts a fully worked out implementation example approaches to analyze the simulations the development of the required equations model verification techniques and validation The book also covers various special topics and includes a real case study involving screening strategies for breast cancer surveillance

*Discrete-event Simulation Based Resource Modelling in Health Technology Assessment* Abdul Rahman Syed Salleh, 2019

**R for Health Technology Assessment** Gianluca Baio, Howard Thom, Petros Pechlivanoglou, 2025-06-30 R for Health Technology Assessment discusses the use of proper statistical software specifically R to perform the whole pipeline of analytic modelling in health technology assessment HTA It has been designed with the objective of establishing the use of R as the standard tool for HTA amongst academics industry practitioners and regulators It covers a lot of ground starting with the necessary background in HTA R and statistical inference followed by various modelling tools ranging from missing data survival analysis and decision trees through to multistate models and discrete event simulation The methods are all illustrated with many detailed worked examples and case studies using real data and there are detailed descriptions of the code and processes Key Features Introductory chapters on the various topics of the book including HTA R and statistical inference A wide range of common analytical tools used in HTA from modelling for individual level data missing data survival analysis decision modelling and network meta analysis More advanced and increasingly popular tools such as those for population adjustment discrete event simulation and the use of web applications as front end for the overall statistical modelling Many detailed worked examples and case studies using real data to illustrate the methodology Fully integrated R code gives detailed guidance on implementation of the techniques Supplemented by a website with additional resources including annotated code and data This text is primarily aimed at modellers working in the field of HTA regulators and reviewers of reimbursement dossiers and cost effectiveness analyses It also complements a wide range of undergraduate and graduate programmes in HTA health and public health economics as well as academic researchers in the field of statistical modelling for HTA

**Cost Effectiveness Modelling for Health Technology Assessment** Richard Edlin, Christopher McCabe, Claire Hulme, Peter Hall, Judy Wright, 2015-08-11 This book provides an introduction to decision analytic cost effectiveness modelling giving the theoretical and practical knowledge required to design and implement analyses that meet the methodological standards of health technology assessment organisations The book guides you through building a decision tree and Markov model and importantly shows how the results of cost effectiveness analyses are interpreted Given the complex nature of cost effectiveness modelling and the often unfamiliar language that runs alongside it we wanted to

make this book as accessible as possible whilst still providing a comprehensive in depth practical guide that reflects the state of the art that includes the most recent developments in cost effectiveness modelling Although the nature of cost effectiveness modelling means that some parts are inevitably quite technical across the 13 chapters we have broken down explanations of theory and methods into bite sized pieces that you can work through at your own pace we have provided explanations of terms and methods as we use them Importantly the exercises and online workbooks allow you to test your skills and understanding as you go along

*Hospital-Based Health Technology Assessment* Laura Sampietro-Colom, Janet Martin, 2017-01-23 A timely work describing how localized hospital based health technology assessment HB HTA complements general arms length HTA agency efforts and what has been the collective global impact of HB HTA across the globe While HB HTA has gained significant momentum over the past few years expertise in the field and information on the operation and organization of HB HTA has been scattered This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital regional national or global level In addition this book is intended for decision makers and policy makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting HTA has traditionally been performed at the National Regional level by HTA Agencies typically linked to governments Yet hospitals are the main entry door for most health technologies HTs Hospital decision makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs usually without adequate information Despite the existence of arms length HTA Agencies inadequate information is available to hospital decision makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field or because even when the report exists the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers Therefore there has recently been a rising trend toward hospital based HTA units and programs These units programs complement the work of National Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context and within required decision making timelines The emergence of HB HTA is creating a comprehensive HTA ecosystem across health care levels which creates better bridges for knowledge translation through relevance and timeliness

Economic Evaluation of Cancer Drugs Iftekhar Khan, Ralph Crott, Zahid Bashir, 2019-06-14 Cancer is a major healthcare burden across the world and impacts not only the people diagnosed with various cancers but also their families carers and healthcare systems With advances in the diagnosis and treatment more people are diagnosed early and receive treatments for a disease where few treatments options were previously available As a result the survival of patients with cancer has steadily improved and in most cases patients who are not cured may receive multiple lines of treatment often with financial consequences for the patients insurers and healthcare systems Although many books exist that address economic evaluation *Economic Evaluation of Cancer Drugs using Clinical Trial and Real World Data* is the first unified text that specifically addresses the economic evaluation of cancer drugs The

authors discuss how to perform cost effectiveness analyses while emphasising the strategic importance of designing cost effectiveness into cancer trials and building robust economic evaluation models that have a higher chance of reimbursement if truly cost effective They cover the use of real world data using cancer registries and discuss how such data can support or complement clinical trials with limited follow up Lessons learned from failed reimbursement attempts factors predictive of successful reimbursement and the different payer requirements across major countries including US Australia Canada UK Germany France and Italy are also discussed The book includes many detailed practical examples case studies and thought provoking exercises for use in classroom and seminar discussions Iftekhar Khan is a medical statistician and health economist and a lead statistician at Oxford University's Center for Statistics in Medicine Professor Khan is also a Senior Research Fellow in Health Economics at University of Warwick and is a Senior Statistical Assessor within the Licensing Division of the UK Medicine and Health Regulation Agency Ralph Crott is a former professor in Pharmacoeconomics at the University of Montreal in Quebec Canada and former head of the EORTC Health Economics Unit and former senior health economist at the Belgian HTA organization Zahid Bashir has over twelve years experience working in the pharmaceutical industry in medical affairs and oncology drug development where he is involved in the design and execution of oncology clinical trials and development of reimbursement dossiers for HTA submission

**Pharmacoeconomics** Renee J. G. Arnold, 2020-08-05 In this era of finite budgets healthcare rationing medication shortages and the global aging and burgeoning of populations numerous stakeholders in the healthcare arena must understand the basic principles of pharmacoeconomics and how these may be correctly applied to facilitate drug development rationing patient segmentation disease management and pricing model development Pharmacoeconomics From Theory to Practice Second Edition focuses on how to more efficiently and rationally leverage these healthcare resources not by restricting access to necessary services but by using them more efficiently This updated volume arms decision makers with the tools they need to make wise choices in an area where the stakes are extremely high the health of the global population Key Features Introduces the major concepts and principles of Pharmacoeconomics Gives updated information about pharmacoeconomic models value based pricing novel modelling methodologies and international utilization of these modalities in government the pharmaceutical industry and health care settings Demonstrates the full range of ethical and moral issues as well as overall public health and commercial concerns that are often involved in decisions entailing pharmacoeconomic issues Presents both theory and methodology discussions including real world examples in each chapter The methods and application of pharmacoeconomics are rapidly evolving so the new edition of this textbook is very timely It provides an excellent introduction for those new to the field whether they be students professionals within the pharmaceutical industry or health care professionals more generally A particularly useful feature of the book is that it gives an introduction both to the main methods used in pharmacoeconomics studies and how these studies are used in decisions about the reimbursement or appropriate use of
