information theory as the algorithmic problem of calculating a sub vector of pre specified size from a multivariate Gaussian
random vector so as to maximize Shannon s differential entropy The text collects and expands on state of the art algorithms
for MESP and addresses its application in the field of environmental monitoring While MESP is a central optimization
problem in the theory of statistical designs particularly in the area of spatial monitoring this book largely focuses on the
unique challenges of its algorithmic side From the perspective of mathematical optimization methodology MESP is rather
unique a 0 1 nonlinear program having a nonseparable objective function and the algorithmic techniques employed are
highly non standard In particular successful techniques come from several disparate areas within the field of mathematical
optimization for example convex optimization and duality semidefinite programming Lagrangian relaxation dynamic
