

Chapter 4. Assembler Directives

This chapter describes the assembler directives. It shows how to define symbols and how to control the placement of code and data in program memory.

Introduction

The A51 assembler has several directives that permit you to define symbol values, reserve and initialize storage, and control the placement of your code.

The directives should not be confused with instructions. They do not produce executable code, and with the exception of the DB, DW and DD directives, they have no direct effect on the contents of code memory. These directives change the state of the assembler, define user symbols, and add information to the object file.

The following table provides an overview of the assembler directives. Page refers to the page number in this user's guide where you can find detailed information about the directive.
