Handbook of Human and Planetary Health Walter Leal Filho, 2022-09-06 This book contains a set of papers which explore the subject matter of human and planetary health at various angles The year 2015 was a special year in the field of human and planetary health In that year the report produced by the Rockefeller Foundation and the journal The Lancet called Safeguarding human health in the Anthropocene epoch report of The Rockefeller Foundation Lancet Commission on planetary health was launched Also in 2015 the World Health Organization and the Secretariat of the Convention on Biological Diversity published the report Connecting global priorities biodiversity and human health a state of knowledge review with over 100 contributors meant to guide future joint actions Both documents comprehensively address the need for a better understanding of the connections between human health and ecosystems and the risks associated with damages to the integrity of the planet The period in which humanity finds itself right now the Anthropocene is a risk one since mankind is putting the planet under considerable pressure These elements have led to the emergence of a new field of research namely planetary health Planetary health seeks to address a very concrete and urgent contemporary problem namely the need to understand quantify and act in order to reverse the effects of human population growth and the

acceleration of socioeconomic activities on the environment and inter alia the disturbances in the Earth's natural ecosystems and how these in turn impact human health and well being. Anthropogenic disturbances in natural ecosystems are characterized by changes in climate, land use, changes in the nitrogen and phosphorus cycle, chemical pollution of soil, water and air, reduction in the availability of drinking water, loss of biodiversity, destruction of the ozone layer and ocean acidification among others. In all these areas there is a perceived need to document and promote examples of initiatives and good practice which may change current trends. This book addresses this need. It documents experiences, case studies and projects which explore the connections between human and planetary health and illustrates examples which show the consequences of ecosystemic disturbances to the health and well being of humanity with the emergence of new diseases, worsening of infectious diseases and increase in chronic non-communicable diseases related to the deterioration of the current food system, hyper-urbanization, microbial resistance, climate-led migration and zoonoses among others. Planetary health is a new effort to deal with the question of sustainability and human life on the planet under an increasingly integrative, transdisciplinary and global perspective since the problems of this planetary crisis cross geopolitical borders and academic boundaries and affect humanity as a whole. This book provides a contribution to this emerging field. Thanks to its design and the contributions by experts from various areas, it provides a welcome contribution to the literature on planetary health and it inspires further works in this field.

Science and Technology in Disaster

Risk Reduction in Asia Rajib Shaw, Koichi Shiwa, Takako Izumi, 2017-10-13. Science and Technology in Disaster Risk Reduction in Asia: Potentials and Challenges provides both a local and global perspective on how to implement the Sendai Framework for Disaster Risk Reduction. Topics demonstrate the advancement of scientific research as it applies to early warning systems including identifying risk and the strengthening of infrastructure for different types of hazards. Through different major disasters, it has become evident that there must be a balance between hard and soft technology and physical process and social solutions. This book demonstrates how this has been successfully implemented in Asia and how these applications can apply on a global basis. Covers new research on the role of science in Disaster Risk Reduction and lessons
