## **Design And Operation Of Automated Container Storage Systems Contributions To Management Science:**

*Design and Operation of Automated Container Storage Systems* Nils Kemme, 2012-11-07 The storage yard is the operational and geographical centre of most seaport container terminals Therefore it is of particular importance for the whole terminal system and plays a major role for trade and transport flows One of the latest trends in container storage operations is the automated Rail Mounted Gantry Crane system which offers dense stacking and offers low labour costs This book investigates whether the operational performance of container terminals is influenced by the design of these storage systems and to what extent the performance is affected by the terminal s framework conditions and discusses the strategies applied for container stacking and crane scheduling A detailed simulation model is presented to compare the performance effects of alternative storage designs innovative planning strategies and other influencing factors The results have useful implications future research practical terminal planning and optimisation

*Container Handling in Automated Yard Blocks* Filip Covic, 2019-01-28 The yard block of a container terminal is the central point of synchronisation for asynchronous container flows between deep sea vessels and transport to the hinterland The structure of the block stipulates that containers are stacked on top of each other with only the topmost container directly accessible by a yard crane This book describes a holistic and integrative approach to container handling in yard blocks to optimise productivity by minimising re handling operations The results provide insights for academic scholars as well as for experts from practical terminal planning and operations The approach presented is two fold first a theoretical foundation of the interdependencies in decision making is established using mathematical programming Secondly operations involving uncertain container arrival information are examined on the basis of a simulation with a rigorous experimental design and statistical evaluation In this context the book develops container handling strategies and analyses the impact of a system for vehicle arrival management the Terminal Appointment System The findings presented in this book are the result of a close cooperation with experts at the port of Hamburg and build on previous research

**Understanding Drivers of Electrification of Transportation Systems in a Commercial Context (Band 118)** Christine Harnischmacher , 2022-11-16 The mitigation of global climate change poses one of the major challenges of the twenty first century Governments all around the world have set ambitious climate and energy specific targets that shape the development of the energy and transportation sectors Increasing the share of renewable energies in the energy mix and substituting conventional vehicles with electric vehicles EVs at the same time poses significant challenges for the power grid The coupling of the energy and transportation sectors offers a promising increase in energy efficiency as the EVs batteries can be used as storage for the provision of utility services by supplying power to the grid for stabilization This is known as the vehicle to grid V2G application Thus suitable V2G applications can contribute to the security of energy supply while at the same time promoting electrified transportation and the integration of renewables These applications are especially efficient in a commercial context where the capacities of several batteries can easily be

aggregated This thesis investigates the role of IS for the electrification and V2G integration of commercial fleets Four studies were conducted and are compiled in this dissertation that demonstrate the feasibility and provide guidelines for incorporating commercial electrified fleets as an active component of the energy economic value chain The understanding gained enables viewing fleet electrification and V2G integration as IS enabled amplification of the energy economic value chain towards ecological sustainability

*Maritime Informatics* Mikael Lind, Michalis Michaelides, Robert Ward, Richard T. Watson, 2020-11-14 This first book on Maritime Informatics describes the potential for Maritime Informatics to enhance the shipping industry It examines how decision making in the industry can be improved by digital technology and introduces the technology required to make Maritime Informatics a distinct and valuable discipline Based on participating in EU funded research over the last six years to improve the shipping industry the editors stipulate that there is a need for the new discipline of Maritime Informatics which studies the application of information systems to increasing the efficiency safety and ecological sustainability of the world's shipping industry This book examines competition and collaboration between shipping companies and also companies who serve shipping needs such as ports and terminals Practical examples from leading experts give the reader real world examples for better understanding

*Sorting Last-In-First-Out Stacks* Fabian Wilschewski, 2024-02-14 This thesis deals with storage systems that are organized in last in first out stacks This approach for storing items is common for example in container terminals and is therefore of great practical interest as well as high relevance in the literature Furthermore optimization problems that may arise in this context are presented and addressed by developing novel mathematical model formulations and customized solution methods

*Freight Forwarder's Intermediary Role in Multimodal Transport Chains* Hans-Joachim Schramm, 2012-01-05 In this book the business of international freight forwarding is examined from both a theoretical and empirical point of view with a special emphasis on multimodal transport chains including sea or air transport operations In such contexts the freight forwarder is always considered The Architect of Transport but this intermediary role seems to be largely neglected in research to date Therefore relevant concepts from economic theory and economic sociology are employed to produce both an intermediary and a network perspective of freight forwarding in order to provide a better understanding of this kind of transportation business Furthermore its intermediary role in such inherent network structures is explored by mapping relationship patterns in a stylized model framework applied to a questionnaire based sample collected among freight forwarders engaged in such multimodal transport chains in Germany especially from Hamburg Bremen and Bremerhaven as well as in Austria in 2003

*Managing Logistics Systems* John M. Longshore, Angela L. Cheatham, 2022-06-09 This textbook introduces logistics from a broad perspective to include all activities throughout the product and service life cycle pertaining to supply chain and logistics management the physical supply and distribution of products and the corresponding maintenance and support It recognizes the mutual interdependence of the major functional areas of the organization including marketing production and finance The emphasis

throughout the text is on logistics in the context of a total business system design process It views the business as a system managing logistics within that system and thus transforming their Supply Chain Pedagogy to aid learning is incorporated throughout every chapter with chapter objectives case studies and concept checks This text is intended for both upper level undergraduate and lower level graduate students in both Business and Engineering on logistics and supply chain tracks It can also serve as a reference for practitioners actively engaged in day to day management of logistics and supply chain activities Supplementary online resources include an instructors manual chapter by chapter PowerPoint slides glossary and a test bank of exam questions

*Nuclear Science Abstracts* ,1973      *Container Terminals and Cargo Systems* Kap Hwan Kim,Hans-Otto Günther,2007-08-06 This book presents new insights and successful solutions to the operational problems of automated container terminals and cargo systems It comprises reports on the state of the art applications of quantitative methods as well as case studies and simulation results Its contributions are written by leading experts from academia and business and address practitioners and researchers in logistics transportation and management
