Design Of A Portfolio Management System For Software Line Development:

Design of a Portfolio Management System for Software Line Development: Merging the Gap Between Software Project and Product Management Michael Lang, 2015 Tracy 1995 p 19 emphasises in his book that in the twenty first century tomorrow will be more different from today than in the past Therefore today s corporations get to stay innovative reinvent themselves continuously and have to design new business In contrast to that software mastery becomes more than ever the key factor for business success Northrop 2008 p 12 In the twenty first century software pervades every sector and has become the bottom line for many organisations Therefore reusability plays a growing role for every business in today s rapid changing world Strahringer 2003 p 5 Thus new paradigms in software engineering are focusing on the reutilisation and modularisation of software solutions One innovative and growing concept since 2003 is software line development which has its origin in the automotive and fashion industry Strahringer 2003 p 5 The key benefit of software line development is the covering of a wide field of application with minimal extra costs by reuse of a common software platform In reference to Ebert Smouts 2003 p 29 the most publications in the field of software lines deal with configuration and change management Whereas the integration of software line development into enterprises product portfolios has been till now widely neglected In contrast to that Jeffery Leliveld 2004 points out that the failure or success of software lines highly depends in particular on their level of integration into companies product portfolio system For this reason the major goal of this research is the realisation of an integrated portfolio management system for software line development This covers at first the determination of the role portfolio management in organisational governance Thereafter the general elements of a portfolio management system will be identified On the other side the specific demands of software line engineering according to the portfolio elements will be analysed The insights of the analysis build the basis for the design of the software product line portfolio management system The design describes the portfolio management system from different architectural perspectives which represent the viewpoint of the diverse stakeholders Moreover different analysis methods will be evaluated with a respective scoring model for the software line product domain and asset application domain At the end the scientific work gives a suggestion for further investigations in the scope of software line portfolio management
