Frey, 2015-11-01 Heirloom dishes and family food traditions are rich sources of nostalgia and provide vivid ways to learn about our families past yet they can be problematic Many family recipes and food traditions are never documented in written or photographic form existing only as

unwritten know how and lore that vanishes when a cook dies Even when recipes are written down they often fail to give the tricks and tips that would allow another cook to accurately replicate the dish Unfortunately recipes are also often damaged as we plunk Grandma s handwritten cards on the countertop next to a steaming pot or a spattering mixer shortening their lives This book is a guide for gathering adjusting supplementing and safely preserving family recipes and for interviewing relatives collecting oral histories and conducting kitchen visits to document family food traditions from the everyday to special occasions It blends commonsense tips with sound archival principles helping you achieve effective results while avoiding unnecessary pitfalls Chapters are also dedicated to unfamiliar regional or ethnic cooking challenges as well as to working with recipes that are orphans surrogates or terribly outdated Whether you simply want to save a few accurate recipes help yesterday s foodways evolve so they are relevant for today s table or create an extensive family cookbook this guidebook will help you to savor your memories

**Assertion-Based Design** Harry D. Foster,Adam C. Krolnik,David J. Lacey,2012-12-06 There is much excitement in the design and verification community about assertion based design The question is who should study assertion based design The emphatic answer is both design and verification engineers What may be unintuitive to many design engineers is that adding assertions to RTL code will actually reduce design time while better documenting design intent Every design engineer should read this book Design engineers that add assertions to their design will not only reduce the time needed to complete a design they will also reduce the number of interruptions from verification engineers to answer questions about design intent and to address verification suite mistakes With design assertions in place the majority of the interruptions from verification engineers will be related to actual design problems and the error feedback provided will be more useful to help identify design flaws A design engineer who does not add assertions to the RTL code will spend more time with verification engineers explaining the design functionality and intended interface requirements knowledge that is needed by the verification engineer to complete the job of testing the design
