

Design for Information offers an integrative approach to learning basic principles for the visual presentation of information. The book surveys pertinent visualizations that are analyzed for their content (information) as well as for their methods of presentation and design strategies (design). Chapters are organized around case studies that, working as teaching boards, provide the context for scrutinizing information design principles and discussion of the histories, theories, and best practices in the field. The selections represent a fraction of the effective graphics that we encounter in this burgeoning field, offering the reader an opportunity to extend the study to solutions in other fields of practice.

The book encourages three different levels of knowledge acquisition: historical, theoretical, and practical, with guidelines for the construction of visualizations. *Design for Information* provides readers with critical and analytical tools that can benefit the design process of visualizing data. Ultimately, the book promotes visual literacy while developing a practical design lexicon in the context of visualization of information.
