American Environmentalism J. Michael Martinez, 2013-06-20 Protecting the natural environment and promoting sustainability have become important objectives but achieving such goals presents myriad challenges for even the most committed environmentalist American Environmentalism Philosophy History and Public Policy examines whether competing interests can be reconciled while developing consistent coherent effective public policy to regulate uses and protection of the natural environment without destroying the national economy It then reviews a range of possible solutions The book delves into key normative concepts that undergird American perspectives on nature by providing an overview of philosophical concepts found in the western intellectual tradition the presuppositions inherent in neoclassical economics and anthropocentric human centered and biocentric earth centered positions on sustainability It traces the evolution of attitudes about nature from the time of the Ancient Greeks through Europeans in the Middle Ages and the Renaissance the Enlightenment and the American Founders the nineteenth and twentieth centuries and up to the present Building on this foundation the author examines the political landscape as non governmental organizations NGOs industry leaders and government officials struggle to balance industrial development with environmental concerns Outrageous claims silly misrepresentations bogus arguments absurd contentions and overblown prophecies of impending calamities are bandied about by many parties on all sides of the debate industry spokespeople elected representatives unelected regulators concerned citizens and environmental NGOs alike In lieu of descending into this morass the author circumvents the silliness to explore the crucial issues through a more focused disciplined approach Rather than engage in acrimonious debate over minutiae as so often occurs in the context of green claims he recasts the issue in a way that provides a cohesive look at all sides This effort may be quixotic but how else to cut the Gordian knot Mechanics of Structures and Materials XXIV Hong Hao, Chunwei Zhang, 2019-08-08 Mechanics of Structures and Materials

**Time-Dependent Behaviour of Concrete Structures** Raymond Ian Gilbert, Gianluca Ranzi, 2010-09-21 Serviceability failures of concrete structures involving excessive cracking or deflection are relatively common even in structures that comply with code requirements This is often as a result of a failure to adequately account for the time dependent deformations of concrete in the design of the structure The serviceability provisions embodied in codes of practice are relatively crude and in some situations unreliable and do not adequately model the in service behaviour of structures In particular they fail to adequately account for the effects of creep and shrinkage of the concrete Design for serviceability is complicated by the non linear and inelastic behaviour of concrete at service loads Providing detailed information this book helps engineers to rationally predict the time varying deformation of concrete structures under typical in service conditions It gives analytical methods to help anticipate time dependent cracking the gradual change in tension stiffening with time creep induced deformations and the load independent strains caused by shrinkage and temperature changes The calculation procedures are illustrated with many worked examples A vital guide for practising engineers and advanced students of structural engineering on the design of concrete structures for serviceability and provides a penetrating insight into the time dependent behaviour of reinforced and prestressed concrete structures

*Time-dependent Behaviour and Design of Composite Steel-concrete Structures* Gianluca Ranzi, Massimiliano Bocciarelli, Alejandro Pérez Caldentey, Gianluca Cusatis, Liugino Dezi, A. Abdullah Dönmez, Giovanni Di Luzi, Yue Geng, Raymond Gilbert, John Hewitt, Javier Jordán, Roberto Leon, Graziano Leoni, Marion Rauch, John van Rooyen, Riccardo Zandonini, Yu-Win Wang, Sumei Zhang, 2021-09-15 Steel concrete composite structures are widely used throughout the world for buildings and bridges A distinguishing feature of this form of construction is the combination of concrete and steel components to achieve enhanced structural performance The time dependent response of concrete and its influence on the service behaviour and design of composite structures are the main focus of this SED For the first time a publication combines a state of the art review of the research with the available design specifications of Europe Australia and New Zealand and USA This publication intends to enhance the awareness of the service response of composite structures and of the latest research and standards developments It is aimed at designers and researchers alike The review of research available in open literature is provided and arranged according to structural typologies i e slabs beams and columns It serves as background information for current service design rules and provides insight into the most recent research advancements The review of available design guidelines presents the similarities and differences of the recommended service design procedures influenced by concrete time effects Selected case studies of building and bridge projects show possible design approaches and the rationale required when dealing with the time dependent response and design of composite structures The authors of this publication are design engineers and academics involved in the service design and research on the time dependent response of composite structures

**Ageing of Infrastructure** Frank Collins, Frédéric Blin, 2018-09-21 The book addresses the problem of ageing infrastructure and how ageing can reduce the service life below expected levels The rate of ageing is affected by the type of construction material

environmental exposure function of the infrastructure and loading each of these factors is considered in the assessment of ageing How do international design codes address ageing Predictive models of ageing behaviour are available and the different types empirical deterministic and probabilistic are discussed in a whole of life context Life cycle plans initiated at the design stage can ensure that the design life is met while optimising the management of the asset reducing life cycle costs and reducing the environmental footprint due to less maintenance remediation interventions and fewer unplanned stoppages and delays Health monitoring of infrastructure can be conducted via implanted probes wired or wireless or by non destructive testing that can routinely measure the durability loading and exposure environments at key locations around the facility Routine monitoring can trigger preventative maintenance that can extend the life of the infrastructure and minimise unplanned and reactive remediation while also providing ongoing data that can be utilised towards more durable future construction Future infrastructure will need to be safe and durable financially and environmentally sustainable over the lifecycle thereby raising socio economic wellbeing The book concludes by discussing the key impacting factors that will need to be addressed The author brings a strong academic and industry background to present a resource for academics and practitioners wishing to address the ageing of built infrastructure
