*The Intellectual Property-Regulatory Complex* Emily Marden, R. Nelson Godfrey, Rachael Manion, 2016-03-06

Advances in agricultural genomics could help address pressing global issues such as world hunger by improving crop yield However overlap and conflict in intellectual property and biosafety regimes known collectively as the Intellectual Property Regulatory Complex create significant barriers to innovation In this collection leading legal policy and economics experts analyze the impact of the Complex on agricultural genomics They reveal how it impacts scientific advancement in ways that are underappreciated when intellectual property and biosafety regimes are examined in isolation After identifying how the interplay between multiple regimes impedes research development and product distribution they propose solutions that would further the aims of the current intellectual property and biosafety regimes while enabling growth and innovation in agricultural genomics

always indicate if practices and policies have enough evidence of impact to be recommended as models that contribute to sustainability objectives of the bioeconomy To address this a context specific approach described in Chapter 5 provides support for countries to make evidence based decisions on policies and investments for the bioeconomy The approach helps to identify good practices and policies ex ante which can help achieve common sustainability objectives of bioeconomy strategies that were presented in the 2019 FAO report Towards sustainable bioeconomy Lessons learned from case studies Taken together this Compendium and the 2019 report provide practical guidelines and resources that can support decision makers and stakeholders in bioeconomy systems to make progress towards reaching sustainable outcomes
