the book **Professional ASP.NET 2.0 Design** Jacob J. Sanford, 2007-08-27 This book is for anyone who wants to learn about using NET for web interface design Beginner or hobbyist NET developers can certainly get a good foundation of NET web interface design by going through this book from cover to cover However more seasoned NET professionals especially if they tend to steer away from the GUI of their projects can also pick up a thing or two by focusing on certain chapters that appeal to them This book is meant to take a reader from the beginning of a project to the completion of the interface design Along the way concepts are illustrated to show how the different pieces play together So anyone who really wants to understand the concepts presented in this book will be able to do so by reading the entire thing However this book should also serve as a good reference after you have read it or in some cases in place of reading it All of the early chapters provide useful information and examples for any web developer Many of the concepts presented after Chapter 4 are more specifically targeted at NET developers In the later chapters the target audience is NET developers or at least people who want to become NET developers In those chapters you should probably have at least a basic understanding of the NET Framework and some experience with Visual Studio 2005 or possibly Visual Studio 2003 If you are completely new to NET you may find it useful to pick up a beginning ASP NET 2 0 book before delving too deeply into those chapters If you want to learn about NET 2 0 web interface design you are the intended audience It should be noted that all of the NET code samples in this book are in C However this shouldn't limit other developers such as VB NET developers from understanding the concepts or being able to replicate the code in their own projects The actual managed code examples are pretty limited and when they are used they should be fairly easy to port over to VB NET This book covers the concepts serious developers need to begin designing cool and consistent web layouts The early chapters focus on general web design standards that you need to grasp in order to move into the later chapters Specifically these concepts are Basic web design considerations colors fonts images accessibility and so on Chapter 2 Photoshop basics to get you started making your own graphics and color schemes Chapter 3 Cascading Style Sheets CSS and their use in web design layout Chapter 4 When you finish these chapters you will have the basic shell for the project that you will continue to develop throughout the book You will have the header graphic color scheme and CSS layout that you will begin to incorporate NET specific concepts to in the later chapters This includes How to make NET controls render accessible CSS code rather than their default tables Chapter 5 Using the built in controls of NET to create easily maintainable and consistent site navigation and how to make them render CSS divs instead of tables Chapter 6 Creating your web site template with Master Pages Chapter 7 Creating themes and skins to style your NET controls Chapter 8 Applying themes to your projects through various approaches including base classing Chapter 9 The final regular chapter ends with you building an entirely new mobile device theme using all of the concepts learned in the previous chapters In Chapter 10 you will start with modifying your graphic to better fit the resolution of your mobile devices You will also learn how to modify your stylesheets and apply them programmatically to be used only for this theme You *Internet Applications*

in Product Design and Manufacturing George Q. Huang, K.L. Mak, 2012-12-06 In recent years the importance of Internet and World Wide Web WWW technologies in manufacturing industries has been rising very rapidly in a global context the impact of which is deemed most profound ever since the Industrial Revolution The waving interests in the electronic commerce and electronic business e commerce e business have spread from the heartland product development to the battlefield shop floor of manufacturing enterprises The number of web applications is ever on the rise and many practitioners are keen on trying these remote systems through web browsers to support their decision making activities Indeed product design and manufacture professionals will soon be able to benefit from such remote services and supports commercially available on the Internet The practice and performance of product development and realization are expected to make immense progress Web applications in product design and manufacture signals the beginning of a new era of the digital manufacturing enterprise However many loopholes are found in the development and application processes because of domain complexity and technology sophistication thus generating new challenges to both the developers and practitioners A simple example is the difference in the user interfaces between web applications and traditional applications Indeed abundant issues need to be resolved before the full launch of digital manufacturing can come into being
