Design of Adaptive Organizations Nobuo Takahashi, 2012-12-06 Organization design has been discussed by many authors in management and organization theory They have obtained intuitive and prescriptive propositions appealing that the best organization design is contingent on the environmental conditions But their studies

called contingency theory are mostly based on empirical research. Most of the propositions are drawn as only inferences from the results of them. On the other hand, decision theoretic models of organizations in the stochastic environment have been studied by some economists and management scientists independently of contingency theory. In this book, important aspects of organization design problems are formulated as statistical decision problems in the framework of management and organization theory. Part One of this book analyzes a short run adaptive problems of the organization design. Part One contains an expanded exposition of the ideas and results published in the professional journals and I would like to thank the anonymous reviewers of the following journals: *Behaviormetrika*, *Human Relations*, *Behavioral Science*. Part Two of this book considers a long run adaptive process in the organization and has not previously been published in its IV present form, although a version of this part is to appear in *Journal of the Department of Liberal Arts*, March 1987, The University of Tokyo. The results of Part One and Part Two are supported by the empirical research on Japanese firms in Part Three. This research was financially supported by Nippon Telegraph and Telephone Public Corporation (NTT). I acknowledge this gratefully.

Innovations in Applied Artificial Intelligence Floriana Esposito, 2005-06-28 Intelligent systems are those which produce intelligent outputs. AI researchers have been focusing on developing and employing strong methods that are capable of solving complex real life problems. The 18th International Conference on Industrial Engineering Applications of Artificial Intelligence Expert Systems IEA AIE 2005 held in Bari Italy presented such work performed by many scientists worldwide. The Program Committee selected long papers from contributions presenting more complete work and posters from those reporting ongoing research. The Committee enforced the rule that only original and unpublished work could be considered for inclusion in these proceedings. The Program Committee selected 116 contributions from the 271 submitted papers which cover the following topics: artificial systems, search engines, intelligent interfaces, knowledge discovery, knowledge based technologies, natural language processing, machine learning, applications, reasoning, technologies, uncertainty management, applied data mining, and technologies for knowledge management. The contributions oriented to the technological aspects of AI and the quality of the papers are witness to a research activity clearly aimed at consolidating the theoretical results that have already been achieved. The conference program also included two invited lectures by Katharina Morik and Roberto Pieraccini. Many people contributed in different ways to the success of the conference and to this volume. The authors who continue to show their enthusiastic interest in applied intelligence research are a very important part of our success. We highly appreciate the contribution of the members of the Program Committee as well as others who reviewed all the submitted papers with efficiency and dedication.
