Design for Climate Change Bill Gething, William Gething, Katie Puckett, 2013 Adapting to climate change is a pressing concern for the construction sector Our built environment and the way buildings are designed constructed and managed has evolved in response to a climate that has been broadly consistent for hundreds of years to come Within a generation our buildings may have to cope under very different conditions *Climate Design* AECOM (Firm), 2010 A collection of works from academics and AECOM's thought leaders Cover The Green Imperative: Ecology and Ethics in Design and Architecture Victor Papanek, 2022-02-01 A fresh edition of the sustainable design pioneer Victor Papanek's classic and ever relevant book examining the important role of design in combating climate change Whether it's horror at the plastic littering the world's beaches or despair at the melting polar ice caps the world is gradually waking up to the impending climate disaster In *The Green Imperative* Papanek argues for design that addresses these issues head on This means using materials that can be recycled and reused no more pointless packaging thinking about how products make us feel and engage all our senses putting nature at the heart of design working at a smaller scale rejecting aesthetics for their own sake

and thinking before we buy First published at the end of the twentieth century this book offered a plethora of honest advice clear examples and withering critiques laying out the flaws of and opportunities for the design world at that time A quarter of a century on Papanek's lucid prose has lost none of its verve and the problems he highlights have only become more urgent giving today's reader both a fascinating historical perspective on the issues at hand and a blueprint for how they might be solved
