Robert, who is 11 years old, undergoes regular examinations and is observed by medical specialists from an early age. He is experiencing complications provoked by an illness described as major issues connected with his chromosomes' condition. This sickness is believed to be a genetic disease characterized by a microdeletion on chromosomal 22's long arm (Kraus et al., 2018). Autism spectrum syndrome and attention deficit hyperactivity issues are more prevalent among children with this disease. Kidney difficulties, schizophrenia, hearing problems, and inflammatory illnesses, including rheumatoid arthritis, are linked to this condition. Multiple later-onset illnesses, such as autoimmune disease, overweight, and mental disorder, are more probable to appear in individuals.

Congenital cardiac abnormalities, unique facial traits, recurrent infections, developmental disorders, learning challenges, and birth defects are these illness's common symptoms. The symptoms of this illness differ tremendously, even within family members, and it impacts many different regions of the body (Sullivan, 2019). Other congenital problems that affected people may have as neonates include renal anomalies and substantial feeding complications. Gastrointestinal discomfort is also fairly frequent in this patient group and clinical setting. Genetic screening is considered the method that serves as a marker of the diagnosis, which is predicted based on the clinical symptoms due to the substantial number of clinical manifestations and the range of appearances. It is suspected in individuals who exhibit one or more chromosomal deletion indications. Inadequate penetrance is a feature of this disease; as a result, numerous variations can occur in clinical expression between people.

Considering the particular situation and the case description, it is feasible to propose jaundice as Brendan's illness. Due to elevated bilirubin levels, jaundice, also referred to as icterus, causes a yellowish or greenish coloration of the skin and white parts of the eyes. In adults and seniors, jaundice is generally a symptom of serious

## **Case Study Pathophysiology:**

**Pathophysiology Case Studies** Hon-Vu Q. Duong, Nina Marcellus, 2021-06-30 Pathophysiology Case Studies is designed to expose nursing students to disease processes in the format of clinical scenarios and essentially to allow them to apply what they have learned. It is designed to be thought provoking. In order to answer the questions the students will have to use not only the available resources i.e. textbooks but also outside sources. The goal is to ignite the process of analytical thinking or logical processing of the information given to solve the problem and come to a reasonable and logical conclusion i.e. a diagnosis or differential diagnosis. It is intended to incorporate the materials learned in class into the clinical application. All the case studies are drawn from professional experiences from the authors. Clinical vignettes are written in a format like the questions that will be asked on standardized exams. It is also a means to introduce the students to a coherent method of presenting a patient's history and physical findings. The workbook is designed to be inclusive but also acknowledge the diversity of students with respect to interests and academic professional backgrounds. This workbook is flexible in that it can be used as an adjunct to the lectures, a mechanism to reinforce the lectured materials in the form of homework, a means to foster group dynamics by assigning case studies to groups of students where they will ultimately have to defend their conclusions, and a mechanism to enhance the students' knowledge base in understanding a disease. We also want to make it a little fun by incorporating crossword puzzle and concept maps. In the end, we hope this workbook will serve as a foundation to future nursing courses.

**Pathophysiology Case Studies** Sharon L. Sims, Donna L. Boland, 1990 **100 Case Studies in Pathophysiology** Harold Joseph Bruyere, 2008-10-01 100 Case Studies in Pathophysiology provides students beginning their formal education in the health sciences with a resource they can use to begin to develop their clinical problem solving and critical thinking skills. This workbook provides a straightforward approach to integrating basic pathophysiology, risk factors, physical examination findings, and clinical laboratory data for 100 significant health problems in the United States today.
