 Evolutionary Optimization NEO 2016 workshop held in September 2016 in Tlalnepantla Mexico The development of powerful
 search and optimization techniques is of great importance in today s world and requires researchers and practitioners to
 tackle a growing number of challenging real world problems In particular there are two well established and widely known
 fields that are commonly applied in this area i traditional numerical optimization techniques and ii comparatively recent bio
 inspired heuristics Both paradigms have their unique strengths and weaknesses allowing them to solve some challenging
 problems while still failing in others The goal of the NEO workshop series is to bring together experts from these and related
 fields to discuss compare and merge their complementary perspectives in order to develop fast and reliable hybrid methods
 that maximize the strengths and minimize the weaknesses of the underlying paradigms In doing so NEO promotes the
 development of new techniques that are applicable to a broader class of problems Moreover NEO fosters the understanding
 and adequate treatment of real world problems particularly in emerging fields that affect all of us such as healthcare smart
 cities big data among many others The extended papers presented in the book contribute to achieving this goal **Manual**
