create As a result many languages have no realistic prospect for morpho syntactic annotation in the foreseeable future The method presented in this book aims to overcome this problem by significantly limiting the necessary data and instead extrapolating the relevant information from another related language The approach has been tested on Catalan Portuguese and Russian Although these languages are only relatively resource poor the same method can be in principle applied to any inflected language as long as there is an annotated corpus of a related language available Time needed for adjusting the system to a new language constitutes a fraction of the time needed for systems with extensive manually created resources days instead of years This book touches upon a number of topics typology morphology corpus linguistics contrastive linguistics linguistic annotation computational linguistics and Natural Language Processing NLP Researchers and students who are interested in these scientific areas as well as in cross lingual studies and applications will greatly benefit from this work Scholars and practitioners in computer science and linguistics are the prospective readers of this book **Nielsen's**
