Name: _____

Study Guide - use your notes and/or the PPTs to complete.

DNA Structure & Function

1. DNA = molecule that contains a living thing's unique genetic code
2. Scientists credited with figuring out the structure of DNA: Chargaff, Franklin & Watson & Crick
(developed the first model of DNA structure in 1953).
3. DNA is found inside ALL cells of ALL living organisms
4. Every single cell in our body contains a **COMPLETE** copy of DNA.

Prokaryote cells = DNA is stored in the cell's cytoplasm

Eukaryote cells = DNA is stored in the cell's nucleus

5. DNA is the "BLUEPRINT" for living organisms? - why is it called this?
set of instructions
6. DNA consists of 2 long strands of nucleotides twisted together in a long spiral called a double helix
7. In your own words, describe how DNA is like a twisted ladder.
2 strands twist in a double helix

Nitrogen bases ALWAYS pair

Adenine (A) always bonds with Thymine (T) in

the other strand

Cytosine (C) always bonds with Guanine (G) in the other strand

8. The structure of DNA is the same in ALL living things; however, the order of base pairs is different and what determines the organism's traits

A Guide to Protein Isolation C. Dennison, 2013-03-09 It is a truism of science that the more fundamental the subject the more universally applicable it is. Nevertheless it is important to strike a level of fundamentalness appropriate to the task in hand. For example, an in-depth study of the mechanics of motor cars would tell one nothing about the dynamics of traffic. Traffic exists on a different level; it is dependent upon the existence of motor vehicles, but the physics and mathematics of traffic can be adequately addressed by considering motor vehicles as mobile blobs with no consideration of how they become mobile. To start a discourse on traffic with a consideration of the mechanics of motor vehicles would thus be inappropriate. In writing this volume I have wrestled with the question of the appropriate level at which to address the physics underlying many of the techniques used in protein isolation. I have tried to strike a level as would be used by a mechanic with perhaps a slight leaning towards an engineer, i.e. a practical level offering appropriate insight but with minimal mathematics. Some people involved in biochemical research have a minimal grounding in chemistry and physics and so I have tried to keep it as simple as possible.
