From Cells To Societies:

From Cells to Societies Alexander S. Mikhailov, Vera Calenbuhr, 2013-06-29 This book written by two well known scientists represents an excellent addition to the Springer Series in Synergetics in several ways. It shows how by rather simple models we can gain remarkable insights into the behavior of complex systems. At the same time it demonstrates the progress made in this interdisciplinary field. While in the early days of Synergetics the self organized coherent action of atoms in the laser a physical device was in the foreground of interest of my book *Synergetics An Introduction* Springer Berlin Heidelberg New York 1977 the coherent action of nerve cells got into the focus of research as is witnessed by the book by P Tass in this series *P Tass Phase Resetting in Medicine and Biology* Springer Berlin Heidelberg New York 1999. In these books the elements were disturbed by noise. Now in the present book by Mikhailov and Calenbuhr the self organized coherent action of otherwise chaotic elements is studied and important as well as surprising results by Kaneko, Mikhailov and others are presented. Let me mention just another highly interesting problem treated in this book: the coherent interaction of tens of thousands of reactions going on in biological cells. But other phenomena such as the formation of swarms of fish or the collective behavior of ants are also modelled. These are just a few examples of the many fascinating subjects dealt with in this book that relate to many disciplines under unifying aspects.

A Complex Systems Perspective of Communication from Cells to Societies Anamaria Berea, 2019-03-20 This book is an interdisciplinary effort to understand the evolution of communication from cells to societies both in living organisms and in non living ones such as designed or emergent systems from socio technological innovations i.e. digital communication institutional communication. It aims to provide better understanding of the universal versus contextual patterns of communication that we can potentially classify and identify if we look deeper into the history and evolution of this phenomenon at large. Novel research from a variety of disciplines such as information theory, biology, linguistics, culture and social science that take a complex perspective is being explored for an integrated understanding of what communication is at a fundamental level.

Cells and Societies John Tyler Bonner, 2015-12-08 The howling monkeys of Barro Colorado Island in Panama have a rudimentary language which serves the needs of their social activities. The red deer of Scotland, the seals of the Pribilof Islands, the beavers, the social insects, the army ants and termites and lastly the colonial and single celled organisms such as amoebae all meet the same basic biological necessities of feeding, reproduction and social coordination. Though the means of meeting the requirements are amazingly varied, Mr Bonner shows that these three functions form a basic pattern that can be recognized in amoebae, in monkeys and in man. In fact wherever life occurs. Methods, Models, Simulations and Approaches Towards a General Theory of Change - Proceedings of the Fifth National Conference on Systems Science Gianfranco Minati, Mario Abram, Eliano Pessa, 2012 The book contains the Proceedings of the 2010 Conference of the Italian Systems Society Papers deal with the interdisciplinary study of processes of changing related to a wide variety of specific disciplinary aspects Classical attempts to deal with them based on generalising approaches used to study the movement of bodies and environmental influence have included ineffective reductionistic simplifications Indeed changing also relates for instance to processes of acquisition and varying properties such as for software growing and aging biological systems learning cognitive systems and socio economic systems growing and developing through innovations Some approaches to modelling such processes are based on considering changes in structure e g phase transitions Other approaches are based on considering 1 periodic changes in structure as for processes of self organisation 2 non periodic but coherent changes in structure as for processes of emergence 3 the quantum level of description Papers in the book study the problem considering its transdisciplinary nature i e systemic properties studied per se and not within specific disciplinary contexts The aim of these studies is to outline a transdisciplinary theory of change in systemic properties Such a theory should have simultaneous corresponding and eventually hierarchical disciplinary aspects as expected for a general theory of emergence Within this transdisciplinary context specific disciplinary research activities and results are assumed to be mutually represented as within a philosophical and conceptual framework based on the theoretical centrality of the observer and conceptual non separability of context and observer related to logically open systems and Quantum Entanglement Contributions deal with such issues in interdisciplinary ways considering theoretical aspects and applications from Physics Cognitive Science Biology Artificial Intelligence Economics Architecture Philosophy Music and Social Systems

From Cells to Organisms Sherrie L. Lyons, 2020-07-20 This book uses the history of cell theory to explore the emergence of biology as a distinct field in its own right separate from anatomy physiology and natural history It also explores nineteenth and twentieth century ideas about heredity and development and the progress that was made at the turn of the century when they began to be studied on their own leading to new understandings of a variety of biological problems from evolution to cancer Investigating this story will help readers gain an appreciation of the historical development of scientific ideas It beautifully illustrates that the process of science is not as straightforward as it is usually portrayed One of the important lessons of this intriguing story is that facts do not necessarily speak for themselves and observations always need to be interpreted

Imaging from Cells to Animals In Vivo Margarida Barroso, Xavier Intes, 2020-12-03 Imaging from Cells to Animals In Vivo offers an overview of optical imaging techniques developed over the past two decades to investigate biological processes in live cells and tissues It comprehensively covers the main imaging approaches used as well as the application of those techniques to biological investigations in preclinical models Among the

areas covered are cell metabolism receptor ligand interactions membrane trafficking cell signaling cell migration cell adhesion cytoskeleton and other processes using various molecular optical imaging techniques in living organisms such as mice and zebrafish Features Brings together biology and advanced optical imaging techniques to provide an overview of progress and modern methods from microscopy to whole body imaging Fills the need for a comprehensive view of application driven development and use of new tools to ask new biological questions in the context of a living system Includes basic chapters on key methods and instrumentation from fluorescence microscopy and imaging to endoscopy optical coherence tomography and super resolution imaging Discusses approaches at different length scales and biomedical applications to the study of single cell whole organ and whole organism behavior Addresses the impact on discovery such as cellular function as implicated in human disease and translational medicine for example in cancer diagnosis

Deep Futures Doug Cocks, 2003 What is the future of humanity Will we survive this century and if we do how well will we survive into the next millennium This text addresses these questions looking at what has been foreseen by serious future gazers and scientists for the prospects of the human and post human lineage

Evolutionary Swarm Robotics Vito Trianni, 2008-05-24 In this book the use of ER techniques for the design of self organising group behaviours for both simulated and real robots is introduced This research has a twofold value From an engineering perspective an automatic methodology for synthesising complex behaviours in a robotic system is described ER techniques should be used in order to obtain robust and efficient group behaviours based on self organisation From a more theoretical point of view the second important contribution brought forth by the author s experiments concerns the understanding of the basic principles underlying self organising behaviours and collective intelligence In this experimental work the evolved behaviours are analysed in order to uncover the mechanisms that have led to a certain organisation In summary this book tries to mediate between two apparently opposed perspectives engineering and cognitive science The experiments presented and the results obtained contribute to the assessment of ER not only as a design tool but also as a methodology for modelling and understanding intelligent adaptive behaviours

Aging, Society, and the Life Course Leslie A. Morgan, Suzanne R. Kunkel, 2015-07-20 This book s unfading preoccupation with social context social processes and social structures distinguishes itself and greatly contributes to the discourse in gerontology The Gerontologist This classic text now in its fifth edition is distinguished by its emphasis on social context social processes and social structures as part of a broader understanding of the sociology of aging and the life course Presenting an objective view of the realities of aging both positive and negative the book examines aging from micro macro personal community societal and global perspectives This fifth edition describes important changes in the field of social gerontology and the growth in such topics as diversity global aging and the life course It addresses major shifts in public policy social institutions and aging related programming initiatives There is a strong focus on the changing landscape of aging particularly in regard to social engagement employment and lifelong learning enhanced health and independence and livable communities for people of all

ages Additionally the book includes new information on the Affordable Care Act and end of life issues The text is uniquely organized featuring theoretical discussions in each chapter and topical essays between chapters Critical thinking and review questions foster an in depth understanding of the material Written in an engaging style the text is for graduate and upper level undergraduate students it is also used effectively in introductory gerontology classes In addition to an Instructor s Manual the fifth edition now includes Power Point slides NEW TO THE FIFTH EDITION Provides updated data on aging and baby boomers in the United States and worldwide Presents expanded focus on baby boomers impact on the larger society Discusses major public policy changes and innovative services and programs affecting older adults Uses detailed examples to illustrate the challenges of sorting out age period and cohort effects in research on aging Covers the Affordable Care Act and up to date information on Medicare Features new information on end of life issues Presents provocative essays on positive and contemporary issues not typically covered including love sex creativity media representations LGBT aging and crime Focuses on enhanced health and independence and aging in place initiatives Provides learning objectives in each chapter and web based extracurricular activities Includes PowerPoint slides in addition to an Instructor s Manual

Report of the Iowa State Horticultural Society ... Iowa State Horticultural Society, 1893 **Cells and Societies** John Tyler Bonner, 1972

Transactions of the Microscopical Society of London Microscopical Society of London, 2022-05-24 Reprint of the original first published in 1865 *Report of the Minnesota State Horticultural Society*, 1925 *The Dimensions of Experience* Andrew P. Smith, 2008-10-30 This book is an evolutionary history of life on earth Its focus is not the evolution of the structural functional adaptations found in any biology textbook though these are necessarily discussed in a general way Its primarily concerned with consciousness with what the organism experiences Just how far back into evolutionary history consciousness extends of course is a highly controversial issue and one which we will probably never resolve with certainty We know we are conscious and most people would probably extend consciousness to other mammals but when it comes to lower vertebrates let alone invertebrates there is no consensus This book takes a what if approach What if all forms of existence were conscious to some extent a view known as panpsychism or panexperientialism Based on those aspects of their function and behavior that we can actually observe and measure what can we say about what this consciousness is like The resulting story is one in which consciousness becomes increasingly more complex over evolutionary history yet is based on facts of animal behavior that any reader regardless of personal views on consciousness can accept In order to simply a vast amount of scientific literature the book focuses on two general properties of consciousness and its behavioral manifestations the experience of an outer world embedded in space and time and that of an inner self that is defined by its relationship to other organisms Two key claims made are that 1 dimensions of externally perceived space and time have emerged more or less one at a time over the course of evolutionary history and 2 the number of spatial temporal dimensions experienced by any organism in the outer world is closely related to experienced inner dimensions in its relationships with other organisms

For example the simplest invertebrate organisms experience one dimension of space in the form of intensity discriminations made of simple stimuli such as light touch and chemical substances Closely correlated with this one dimensional experience of the outer world is the ability to make simple self other discriminations in which the organism in effect distinguishes itself one dimensionally from the outer world Somewhat more evolved invertebrates such as arthropods experience two dimensions of space their perception being largely limited to shapes contrasts and surfaces They can also distinguish between two dimensions in their relationships with other organisms as exhibited in the ability to discriminate such classes of other as male vs female and kin vs non kin The most highly evolved invertebrates as well as all vertebrates experience additional dimensions of space and or time and make still finer discriminations among other organisms The evolutionary story is not confined to organisms however The book argues that the same kind of dimensional relationships exist on lower levels of existence Thus there are atoms that recognize and interact with other atoms in various degrees of dimensions and there are cells that recognize and interact with other cells in different numbers of dimensions Again the minimal claim being made is that the function and behavior of these lifeforms can be understood in terms of dimensions while leaving it up to individual readers to decide whether this could reflect a similar dimensionality of consciousness Review by Kirkus Discoveries A lucid thought provoking and wide ranging metaphysical treatise by novelist scientific researcher and Stanford Ph D Smith Heralded as the first complete history of consciousness ever written The Dimensions of Experience covers an astonishing

A Theoretical Review of Individual and Group Psychological Reactions to Stress James Grier Miller, 1963 **Complexity in Society: From Indicators Construction to their Synthesis** Filomena Maggino, 2017-07-27 This volume discusses the many recent significant developments and identifies important problems in the field of social indicators In the last ten years the methodology of multivariate analysis and synthetic indicators construction significantly developed In particular starting from the classical theory of composite indicators many interesting approaches have been developed to overcome the weaknesses of composites This volume focuses on these recent developments in synthesizing indicators and more generally in quantifying complex phenomena **Domains and Major Transitions of Social Evolution** Jacobus J.

Boomsma, 2023-05-24 Evolutionary change is usually incremental and continuous but some increases in organizational complexity have been radical and divisive Evolutionary biologists who refer to such events as major transitions have not always appreciated that these advances were novel forms of pairwise commitment that subjugated previously independent agents Inclusive fitness theory convincingly explains cooperation and conflict in societies of animals and free living cells but to deserve its eminent status it should also capture how major transitions originated from prokaryote cells to eukaryote cells via differentiated multicellularity to colonies with specialized queen and worker castes As yet no attempt has been made to apply inclusive fitness principles to the origins of these events Domains and Major Transitions of Social Evolution develops the idea that major evolutionary transitions involved new levels of informational closure that moved beyond looser

partnerships Early neo Darwinians understood this principle but later social gradient thinking obscured the discontinuity of life s fundamental organizational transitions The author argues that the major transitions required maximal kinship in simple ancestors not conflict reduction in already elaborate societies Reviewing more than a century of literature he makes testable predictions proposing that open societies and closed organisms require very different inclusive fitness explanations It appears that only human ancestors lived in societies that were already complex before our major cultural transition occurred We should therefore not impose the trajectory of our own social history on the rest of nature This thought provoking text is suitable for graduate level students taking courses in evolutionary biology behavioural ecology organismal developmental biology and evolutionary genetics as well as professional researchers in these fields It will also appeal to a broader interdisciplinary audience including the social sciences and humanities

Alcohol in Every-day Life Emma L. Benedict Transeau, Cora Frances Stoddard, 1913

Darwinian Dynamics Richard E. Michod, 2021-01-12 The concept of fitness has long been a topic of intense debate among evolutionary biologists and their critics with its definition and explanatory power coming under attack In this book Richard Michod offers a fresh dynamical interpretation of evolution and fitness concepts He argues that evolution has no enduring products what matters is the process of genetic change Whereas many biologists have focused on competition and aggression as determining factors in survival Michod by concentrating on the emergence of individuality at new and more complex levels finds that cooperation plays even a greater role Michod first considers the principles behind the hierarchically nested levels of organization that constitute life genes chromosomes genomes cells multicellular organisms and societies By examining the evolutionary transitions from the molecular level up to the whole organism the author explains how cooperation and conflict in a multilevel setting leads to new levels of fitness He builds a model of fitness drawing on recent developments in ecology and multilevel selection theory and on new explanations of the origin of life Michod concludes with a discussion of the philosophical implications of his theory of fitness a theory that addresses the most fundamental and unique concept in all of biology
