business environments such as new regulations and business opportunities modern enterprises are subject to extensive research and study For the understanding design and engineering of modern enterprises and their complex business processes the discipline of enterprise engineering requires sound engineering principles and systematic approaches based on rigorous theories Along with that a paradigm shift seems to be needed for addressing these issues adequately The main paradigm shift is the consideration of an enterprise and its business processes as a social system In its social setting an enterprise and its business processes represent actors with certain authorities and assigned roles who assume certain responsibilities in order to provide a service to its environment Second to that a paradigm shift is to look at an enterprise as an artifact purposefully designed for a certain mission and goal The need for this paradigm shift along with the complexity and agility of modern enterprises gives inspiration for the emerging discipline of enterprise engineering that requires development of new theories and methodologies To this end the prominent methods and tools of modeling and simulation play a significant role Both conceptual modeling and simulation are widely used for understanding analyzing and engineering an enterprise its organization and business processes
