PAUL HORWICH

From A Deflationary Point Of View

Carlo Nicolai, Johannes Stern

From A Deflationary Point Of View:

From a Deflationary Point of View Paul Horwich, 2005-02-10 Deflationism has emerged as one of the most significant developments in contemporary philosophy. It is best known as a story about truth roughly that the traditional search for its underlying nature is misconceived since there can be no such thing. However, the scope of deflationism extends well beyond that particular topic. For in the first place, such a view of truth substantially affects what we should say about neighboring concepts such as reality, meaning, and rationality. And in the second place, the anti-theoretical meta-philosophy that lies behind that view, the idea that philosophical problems are characteristically based on confusion and should therefore be dissolved rather than solved, may fruitfully be applied throughout the subject in epistemology, ethics, the philosophy of science, metaphysics, and so on. The essays reprinted here were written over the last twenty-five years. They represent Paul Horwich's development of the deflationary perspective and demonstrate its considerable power and fertility. They concern a broad array of philosophical problems: the nature of truth, realism vs. anti-realism, the creation of meaning, epistemic rationality, the conceptual role of ought, probabilistic models of scientific reasoning, the autonomy of art, the passage of time, and the trajectory of Wittgenstein's philosophy. They appear as originally published except for the correction of obvious mistakes, the interpolation of clarifying material, and the inclusion of new footnotes to indicate Horwich's subsequent directions of thought.

New Frontiers in Truth Fabio Bacchini, Massimo Dell'Utri, 2015-01-12 Although philosophers have been concerned with truth since at least the age of Plato, the last thirty years have witnessed a veritable explosion of the philosophical debate on this topic. The touchpaper which lit the fuse for this was undoubtedly the Deflationist Renaissance half a century after the seminal work of F. P. Ramsey due in the Seventies both to the Quinean disquotational interpretation of the Tarskian truth definitions and to the development of the prosentential theory of truth by D. Grover, J. Kamp, and N. Belnap, and from the second half of the Eighties onwards to the forceful defences of deflationary conceptions provided by H. Field and P. Horwich. The philosophical struggle on deflationism has been thought provoking by arguing on the merits and shortcomings of such a conception; philosophers have come to broaden and deepen the discussion on truth beyond the boundaries of deflationism. The varieties of problems tackled by the essays in this book highlight how the land of Truth is still far from having been totally explored and how in this intellectual endeavour real progresses can be achieved.

In Defense of Deflation Philipp Bagus, 2014-12-26 This book analyses the causes and consequences of deflation. In contrast to the widespread belief that deflation would be harmful to the economy as a whole, the author argues that free market deflation is liberating and beneficial. Several myths of deflation are exposed and the reasons for the widespread deflation phobia that serves to justify expansionary monetary policy, i.e. inflation, are investigated. Two historical case studies, the growth deflation in the US after the Civil War and the bank credit deflation in Germany during the Great Depression, are discussed to illustrate the points made in the theoretical analysis of deflation.

The Moon Points Back Koji Tanaka, Yasuo Deguchi, Jay L. Garfield, Graham

Priest, 2015 *The Moon Points Back* investigates central areas of Buddhist philosophy most importantly the notion of emptiness *sunyata* using the techniques of contemporary analytic philosophy and logic The volume's approach allows for novel understandings and insights of these areas showing how Buddhist philosophers can engage with debates in contemporary Western philosophy

From Logic to Practice Gabriele Lolli, Marco Panza, Giorgio Venturi, 2014-11-28 This book brings together young researchers from a variety of fields within mathematics philosophy and logic It discusses questions that arise in their work as well as themes and reactions that appear to be similar in different contexts The book shows that a fairly intensive activity in the philosophy of mathematics is underway due on the one hand to the disillusionment with respect to traditional answers on the other to exciting new features of present day mathematics The book explains how the problem of applicability once again plays a central role in the development of mathematics It examines how new languages different from the logical ones mostly figural are recognized as valid and experimented with and how unifying concepts structure category set are in competition for those who look at this form of unification It further shows that traditional philosophies such as constructivism while still lively are no longer only philosophies but guidelines for research Finally the book demonstrates that the search for and validation of new axioms is analyzed with a blend of mathematical historical philosophical psychological considerations

Use Against Scepticism Massimiliano Vignolo, 2009-10-02 What place is left for semantic notions There are three main positions in response to that question eliminativism physicalism and semanticalism This book argues in favour of a version of semanticalism That version of semanticalism does not make semantic notions mysterious as if they are added from outside the realm of nature as is the case with the Cartesian conception of mental properties Semantic properties are treated as emergent properties reference to which serves to play a normative role in the account of the nature of linguistic expressions The need for positing semantic properties stems from the fact that the best explanation of the nature of linguistic expressions as guides to reality to inform and to learn about the states of the world invokes semantic properties It consists in endowing linguistic expressions with semantic properties that correlate them to things and states of the world Semantics then should be kept distinct from the theory of meaning We need the theory of meaning for giving an account of linguistic competence in order to explain speakers linguistic behaviour but we need semantics in order to explain the nature of the objects produced by the behavioural output of linguistic competence Consider a speaker who reads the sentence it will be sunny and warm tomorrow on the weather forecast page of the newspaper We do not need to model his understanding as if he knew the semantic properties of the expressions occurring in that sentence Rather we need to invoke the semantic properties of that sentence and of its constituents in order to explain the social practice of uttering and writing it to inform people about weather conditions This book argues that liberal naturalists are entitled to endorse the same attitude towards semantic properties as W V O Quine's towards mathematical entities We ought to accept semantic properties since our best theory of the world makes reference to them The

metaphysical principle of the supervenience of semantic properties over naturalistic properties though unexplained is justified to the extent that it too belongs to our best overall theory of the world which as a whole faces the tribunal of experience

Fictional Objects Stuart Brock, Anthony Everett, 2015-06-04 Eleven original essays discuss a range of puzzling philosophical questions about fictional characters and more generally about fictional objects For example they ask questions like the following Do they really exist What would fictional objects be like if they existed Do they exist eternally Are they created Who by When and how Can they be destroyed If so how Are they abstract or concrete Are they actual Are they complete objects Are they possible objects How many fictional objects are there What are their identity conditions What kinds of attitudes can we have towards them This volume will be a landmark in the philosophical debate about fictional objects and will influence higher level debates within metaphysics the philosophy of mind and the philosophy of language

Modes of Truth Carlo Nicolai, Johannes Stern, 2021-03-30 The aim of this volume is to open up new perspectives and to raise new research questions about a unified approach to truth modalities and propositional attitudes The volume's essays are grouped thematically around different research questions The first theme concerns the tension between the theoretical role of the truth predicate in semantics and its expressive function in language The second theme of the volume concerns the interaction of truth with modal and doxastic notions The third theme covers higher order solutions to the semantic and modal paradoxes providing an alternative to first order solutions embraced in the first two themes This book will be of interest to researchers working in epistemology logic philosophy of logic philosophy of language philosophy of mathematics and semantics The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

The Growing-Block View Graeme Forbes, 2025-05-15 What makes time interesting and what is time Graeme A Forbes presents a robust defence of the metaphysical asymmetry between past and future providing a compelling argument for the acceptance of the Growing Block view Taking us from the armchair to philosophy of physics and then out to the human world Forbes considers the ontological questions that have been the focus of most of the literature on the metaphysics of time Across three parts he addresses questions central to the philosophy of time Part I asks why we should think that time does something that space does not Part II examines why we should think that the past differs in some metaphysically interesting way from the future and Part III shows why we should accept the Growing Block view the view on which the past exists the future doesn't and the passage of time is causation bringing about events in accordance with the laws of nature This wide ranging and engaging exploration of persistence experience agency and more makes a radical contribution to our understanding of the philosophy of time

Metasemantics Alexis Burgess, Brett Sherman, 2014-10-30 Metasemantics comprises new work on the philosophical foundations of linguistic semantics by a diverse group of established and emerging experts in the philosophy of language metaphysics and the theory of content The science of semantics aspires to systematically specify the meanings of linguistic

expressions in context The paradigmatic metasemantic question is accordingly what more basic or fundamental features of the world metaphysically determine these semantic facts Efforts to answer this question inevitably raise others Where are the boundaries of semantics What is the essence of the meaning relation Which framework should we use for semantic theorizing What are the intrinsic natures of semantic values Are the semantic facts metaphysically determinate What is semantic competence Metasemantic inquiry has long been recognized as a central part of the philosophy of language but recent developments in metaphysics and semantics itself now allow us to approach these classic questions with an unprecedented degree of precision The essays collected here provide promising new perspectives on old problems pose questions that suggest novel research projects and taken together greatly sharpen our understanding of linguistic representation

The Metaphysics of Truth Douglas Edwards, 2018-05-31 What is truth What role does truth play in the connections between language and the world What is the relationship between truth and being The Metaphysics of Truth tackles these fundamental philosophical questions and proposes a distinctive metaphysical worldview Douglas Edwards develops a detailed pluralist theory which holds that there are different relationships between language and the world in different subject areas or domains He explains what domains are how different domains are individuated which metaphysical frameworks apply in different domains and how a pluralist view of truth plays a key role The connections between truth and being are explored yielding a form of ontological pluralism the idea that there are different ways of being which increases the explanatory power of the view This project is carried out in a climate where the traditionally central issue of the nature of truth has diminished in significance due to the rise of deflationary and primitivist views which deny that there are interesting and informative things to say about truth Edwards responds to these views and demonstrates the importance of the metaphysics of truth with regard to both the study of truth itself and metaphysical debates more generally Moreover Edwards pays particular attention to domains which have not been given much consideration in debates about truth namely the institutional and social domains and connects work on the metaphysics of truth and being to key issues in social construction

Meaning Paul Horwich, 1998 What is meaning Paul Horwich presents an original philosophical theory demonstrates its richness and defends it against all comers At the core of his theory is the idea made famous by Wittgenstein that the meaning of a word derives from its use Horwich articulates this idea in a new way that will restore it to the prominence that it deserves He surveys the diversity of valuable insights into meaning that have been gained in the twentieth century and seeks to accommodate them within his theory His aim is not to correct a common sense view of meaning but to vindicate it he seeks to take the mystery out of meaning Horwich's 1990 book Truth established itself both as the definitive exposition and defence of a notable philosophical theory minimalism and as a stimulating straightforward introduction to philosophical debate about truth Meaning now gives the broader context in which the theory of truth operates and is published simultaneously with a revised edition of Truth in which Horwich refines and develops his treatment of the subject

in the light of subsequent discussions while preserving the distinctive format which made the book so successful The two books together present a compelling view of the relations between language thought and reality They will be essential reading for all philosophers of language

Truth and Its Nature (if Any) J. Peregrin, 2013-03-14 The question how to turn the principles implicitly governing the concept of truth into an explicit definition or explication of the concept hence coalesced with the question how to get a finite grip on the infinity of T sentences Tarski's famous and ingenious move was to introduce a new concept satisfaction which could be on the one hand recursively defined and which on the other hand straightforwardly yielded an explication of truth A surprising by product of Tarski's effort to bring truth under control was the breathtaking finding that truth is in a precisely defined sense ineffable that no non trivial language can contain a truth predicate which would be adequate for the very 4 language This implied that truth and consequently semantic concepts to which truth appeared to be reducible proved itself to be strangely language dependent we can have a concept of truth in L for any language L but we cannot have a concept of truth applicable to every language In a sense this means as Quine 1969 p 68 put it that truth belongs to transcendental metaphysics and Tarski's scientific investigations seem to lead us back towards a surprising proximity of some more traditional philosophical views on truth

3 TARSKI'S THEORY AS A PARADIGM

So far Tarski himself Subsequent philosophers then had to find out what his considerations of the concept of truth really mean and what are their consequences and this now seems to be an almost interminable task

Charles Taylor Ruth Abbey, 2004-01-26 Charles Taylor is a distinctive figures in contemporary philosophy In a time of increasing specialization Taylor contributes to areas of philosophical conversation across a wide spectrum of ideas including moral theory theories of subjectivity political theory epistemology hermeneutics philosophy of mind philosophy of language and aesthetics His most recent writings have seen him branching into the study of religion Written by a team of international authorities this collection will be read primarily by students and professionals in philosophy political science religious studies but will appeal to a broad swathe of professionals across the humanities and social sciences

Manfred Frank Terry Pinkard Robert Stern **Deflation and Fiscal Deficits** Yoshiaki Sakai, 2024-04-09 In this study on
the Japanese economy the author focuses on three problems related to economic policy and presents their answers The
author analyzes i what mechanisms exist for fiscal policy and the price level ii whether the MMT proposition that public
deficits increase people's wealth and savings fits into the standard macro model and iii whether Blanchard's assertion that
fiscal deficits are net wealth in the US economy can be applied to Japanese economy as well The propositions of Sims FTPL
Kelton's MMT Japan's Ricardian type argument and the non Ricardian type of government by Blanchard have been
understood as independent economic perceptions but they will be theoretically shown as a coherent story Namely this study
presents a macroeconomic framework that includes the financial sector and derives Sims proposition that fiscal policy can be
the sole determinant of the price level It also shows that MMT's claim that budget deficits increase our wealth and collective
savings can inevitably hold within this framework Furthermore it presents a model that consistently explains that public debt
leads to financial collapse but contributes to economic welfare **Hearings** United States. Congress. House. Committee on
