**From Genes to Genomes** Jeremy W. Dale, Malcolm von Schantz, 2002-10-18 Rapid advances in our understanding of genetics have required that new books contain topics such as the concept and theory of gene cloning transgenics genomics and various other coverage of traditional and contemporary subjects Although there is an abundance of textbooks that cover introductory genetics and advanced courses in genetics there is a noticeable gap at the intermediate second year level In the past gene structure function and expression were taught at final year postgraduate level but the rapid advances in our understanding of genetics has encouraged courses to change considerably Over recent years these topics have filtered down the curriculum and are currently taught as core topics at second year with a corresponding change in textbook requirements Where once second year students were restricted to learning about the concept and theory of gene cloning now they routinely clone genes for themselves as part of their practical assignments Genes to Genomics will fill the gap cover much of the same ground as previous titles but go further on contemporary topics like transgenics sequence comparison and analysis of variation A concise up to date textbook that provides a balanced coverage of traditional and contemporary topics taught within intermediate courses in molecular genetics Jeremy Dale has a proven track record as the successful author of Molecular Genetics of Bacteria Genes to Genomics will include a series of feature box outs that will examine some of the topical issues related to the scientific concepts and examples explored within the text A range of questions and exercises including worked examples and web based practicals An accompanying web site will allow the authors to keep their audience up to date in the areas that are prone to date most rapidly between successive editions of the textbook It will also include the illustrations and images from the textbook in addition to worked examples answers to questions within the book and links to related websites of key interest
