Computer Vision Using Local Binary Patterns Computational Imaging And Vision:

Computer Vision Using Local Binary Patterns Matti Pietikäinen, Abdenour Hadid, Guoying Zhao, Timo Ahonen, 2011-06-21 The recent emergence of Local Binary Patterns LBP has led to significant progress in applying texture methods to various computer vision problems and applications The focus of this research has broadened from 2D textures to 3D textures and spatiotemporal dynamic textures Also where texture was once utilized for applications such as remote sensing industrial inspection and biomedical image analysis the introduction of LBP based approaches have provided outstanding results in problems relating to face and activity analysis with future scope for face and facial expression recognition biometrics visual surveillance and video analysis Computer Vision Using Local Binary Patterns provides a detailed description of the LBP methods and their variants both in spatial and spatiotemporal domains This comprehensive reference also provides an excellent overview as to how texture methods can be utilized for solving different kinds of computer vision and image analysis problems Source codes of the basic LBP algorithms demonstrations some databases and a comprehensive LBP bibliography can be found from an accompanying web site Topics include local binary patterns and their variants in spatial and spatiotemporal domains texture classification and segmentation description of interest regions applications in image retrieval and 3D recognition Recognition and segmentation of dynamic textures background subtraction recognition of actions face analysis using still images and image sequences visual speech recognition and LBP in various applications Written by pioneers of LBP this book is an essential resource for researchers professional engineers and graduate students in computer vision image analysis and pattern recognition The book will also be of interest to all those who work with specific applications of machine vision

Computer Vision Metrics Scott Krig, 2014-06-14 Computer Vision Metrics provides an extensive survey and analysis of over 100 current and historical feature description and machine vision methods with a detailed taxonomy for local regional and global features This book provides necessary background to develop intuition about why interest point detectors and feature descriptors actually work how they are designed with observations about tuning the methods for achieving robustness and invariance targets for specific applications The survey is broader than it is deep with over 540 references provided to dig deeper The taxonomy includes search methods spectra components descriptor representation shape distance functions accuracy efficiency robustness and invariance attributes and more Rather than providing how to source code examples and shortcuts this book provides a counterpoint discussion to the many fine opencv community source code resources available for hands on practitioners

Local Binary Patterns: New Variants and Applications Sheryl Brahnam, Lakhmi C. Jain, Loris Nanni, Alessandra Lumini, 2013-09-01 This book introduces Local Binary Patterns LBP arguably one of the most powerful texture descriptors and LBP variants This volume provides the latest reviews of the literature and a presentation of some of the best LBP variants by researchers at the forefront of textual analysis research and research on LBP descriptors and variants The value of LBP variants is illustrated with reported experiments

using many databases representing a diversity of computer vision applications in medicine biometrics and other areas There is also a chapter that provides an excellent theoretical foundation for texture analysis and LBP in particular A special section focuses on LBP and LBP variants in the area of face recognition including thermal face recognition This book will be of value to anyone already in the field as well as to those interested in learning more about this powerful family of texture descriptors
