Wingreen, Amelia Samandari, 2024-05-16 Information Technology Security and Risk Management Inductive Cases for Information Security is a compilation of cases that examine recent developments and issues that are relevant to IT security managers risk assessment and management and the broader topic of IT security in the 21st century As the title indicates the cases are written and analyzed inductively which is to say that the authors allowed the cases to speak for themselves and lead where they would rather than approach the cases with presuppositions or assumptions regarding what the case should be about In other words the authors were given broad discretion to interpret a case in the most interesting and relevant manner possible any given case may be about many things depending on the perspective adopted by the reader and many different lessons may be learned The inductive approach of these cases reflects the design philosophy of the advanced IT Security and Risk Management course we teach on the topic here at the University of Canterbury where all discussions begin with the analysis of a specific case of interest and follow the most interesting and salient aspects of the case in evidence In our course the presentation analysis and discussion of a case

are followed by a brief lecture to address the conceptual theoretical and scholarly dimensions arising from the case The inductive approach to teaching and learning also comes with a huge advantage the students seem to love it and often express their appreciation for a fresh and engaging approach to learning the sometimes highly technical content of an IT security course As instructors we are also grateful for the break in the typical scripted chalk and talk of a university lecture afforded by the spontaneity of the inductive approach We were motivated to prepare this text because there seems to be no other book of cases dedicated to the topic of IT security and risk management and because of our own success and satisfaction with inductive teaching and learning We believe this book would be useful either for an inductive case based course like our own or as a body of cases to be discussed in a more traditional course with a deductive approach There are abstracts and keywords for each case which would help instructors select cases for discussions on specific topics and PowerPoint slides are available as a guide for discussion about a given case

Methods for Reliability Improvement and Risk Reduction Michael Todinov, 2018-12-10 Reliability is one of the most important attributes for the products and processes of any company or organization This important work provides a powerful framework of domain independent reliability improvement and risk reducing methods which can greatly lower risk in any area of human activity It reviews existing methods for risk reduction that can be classified as domain independent and introduces the following new domain independent reliability improvement and risk reduction methods Separation Stochastic separation Introducing deliberate weaknesses Segmentation Self reinforcement Inversion Reducing the rate of accumulation of damage Permutation Substitution Limiting the space and time exposure Comparative reliability models The domain independent methods for reliability improvement and risk reduction do not depend on the availability of past failure data domain specific expertise or knowledge of the failure mechanisms underlying the failure modes Through numerous examples and case studies this invaluable guide shows that many of the new domain independent methods improve reliability at no extra cost or at a low cost Using the proven methods in this book any company and organisation can greatly enhance the reliability of its products and operations

**Applied Ethics** Ruth F. Chadwick, Doris Schroeder, 2002

The Law of Unmanned Aircraft Systems Benjamyn I. Scott, 2022-07-12 Aerospace Law and Policy Series Volume 11 In recent years few industries have grown so prodigiously as that of unmanned aircraft systems UAS and as a result developments in national regional and international law and policy are being initiated and implemented This new edition of the definitive survey and guide first published in 2016 reflects the expansion of this

sector and the importance placed on it by a diverse range of stakeholders as well as the enlarged regulatory and policy landscape. In addition to updating many of the original chapters the second edition covers new topics and moves away from a purely introductory book to a more detailed and critical compendium. Authorship has also been extended beyond the original scope of contributors which originally centred around those affiliated with Leiden University's Institute of Air and Space Law and now includes additional experts from all around the world each of whom explores both already existing rules and proposals coming from national, regional and international levels. As well as broadened discussions on such fundamental legal issues as insurance, financing, liability, accidents, investigation, privacy, cyber security, stakeholder organisations and industry standards the second edition takes into account major recent developments in such areas as the following: applicability and relevance of international regulatory instruments coming into force of the European Union; UAS related laws; evolution of different States' national law; public safety e.g. design, production, operation and maintenance; development of unmanned traffic management systems; commercial operations including urban air mobility e.g. flying taxis, cargo delivery; high altitude activities and developments in defence and security e.g. dual use counter UAS industry to combat illegal use. As in the first edition a representative cross section of national laws is included covering twenty one different jurisdictions. This fully updated edition not only synthesises and clarifies the complex body of international, regional and national UAS related law but also provides expert insight into trends and areas of concern for numerous stakeholders. Without a doubt it will be of immeasurable value to lawyers, relevant governmental and non governmental agencies, aviation law scholars and strategic planners in the wider aviation and transport industries.
