while ignoring the true determinant of income inequality the production of wealth We cannot properly understand inequality if we focus exclusively on the distribution of wealth and ignore wealth production factors such as geography demography and culture Sowell contends that liberals have a particular interest in misreading the data and chastises them for using income inequality as an argument for the welfare state Refuting Thomas Piketty Paul Krugman and others on the left Sowell draws on accurate empirical data to show that the inequality is not nearly as extreme or sensational as we have been led to believe Transcending partisanship through a careful examination of data *Wealth Poverty and Politics* reveals the truth about the most explosive political issue of our time

Religion and Cyberspace Morten Hojsgaard, Margit Warburg, 2005-09-15 In the twenty first century religious life is increasingly moving from churches mosques and temples onto the Internet Today anyone can go online and seek a new form of religious expression without ever encountering a physical place of worship or an ordained teacher or priest The digital age offers virtual worship cyber prayers and talk boards for all of the major world faiths as well as for pagan organisations and new religious movements It also abounds with misinformation religious bigotry and information terrorism Scholars of religion need to understand the emerging forum that the web offers to religion and the kinds of religious and social interaction that it enables *Religion and Cyberspace* explores how religious individuals and groups are responding to the opportunities and challenges that cyberspace brings It asks how religious experience is generated and enacted online and how faith is shaped by factors such as limitless choice lack of religious authority and the conflict between recognised and non recognised forms of worship Combining case studies with the latest theory its twelve chapters examine topics including the history of online worship virtuality versus reality in cyberspace religious conflict in digital contexts and the construction of religious identity online Focusing on key themes in this groundbreaking area it is an ideal introduction to the fascinating questions that religion on the Internet presents

Email and Ethics Emma Rooksby, 2003-08-27 E mail and Ethics explores the ways in which interpersonal relations are affected by being conducted via computer mediated communication The advent of this channel of communication has prompted a renewed investigation into the nature and value of forms of human association Rooksby addresses these concerns in her rigorous investigation of the benefits limitations and implications of computer mediated communication With its depth of research and clarity of style this book will be of essential interest to philosophers scholars of communication cultural and media studies and all those interested in the importance and implications of computer mediated communication

Wired Shut Tarleton Gillespie, 2009-09-18 How the shift toward technical copy protection in the battle over digital copyright depends on changing political and commercial alignments that are profoundly shaping the future of cultural expression in a digital age While the public and the media have been distracted by the story of Napster warnings about the evils of piracy and lawsuits by the recording and film industries the enforcement of copyright law in the digital world has quietly shifted from regulating copying to regulating the design of technology Lawmakers and commercial interests are pursuing what might be called a

technical fix instead of specifying what can and cannot be done legally with a copyrighted work this new approach calls for the strategic use of encryption technologies to build standards of copyright directly into digital devices so that some uses are possible and others rendered impossible In *Wired Shut* Tarleton Gillespie examines this shift to technical copy protection and its profound political economic and cultural implications Gillespie reveals that the real story is not the technological controls themselves but the political economic and cultural arrangements being put in place to make them work He shows that this approach to digital copyright depends on new kinds of alliances among content and technology industries legislators regulators and the courts and is changing the relationship between law and technology in the process The film and music industries he claims are deploying copyright in order to funnel digital culture into increasingly commercial patterns that threaten to undermine the democratic potential of a network society In this broad context Gillespie examines three recent controversies over digital copyright the failed effort to develop copy protection for portable music players with the Strategic Digital Music Initiative SDMI the encryption system used in DVDs and the film industry's legal response to the tools that challenged them and the attempt by the FCC to mandate the broadcast flag copy protection system for digital television In each he argues that whether or not such technical constraints ever succeed the political alignments required will profoundly shape the future of cultural expression in a digital age

Human Choice and Computers Klaus Brunnstein, Jacques Berleur, 2013-04-18 *Human Choice and Computers* Issues of Choice and Quality of Life in the Information Society presents different views about how terrorist actions are influencing political and social discussions and decisions and it covers questions related to legitimacy and power in the Information Society Ethical principles are important guidelines for responsible behavior of IT professionals But even under strong external pressure long ranging aspects such as education and the roles of developing countries in the Information Society are important to discuss especially to enable all to actively participate in information processes

The Science of Computing Matti Tedre, 2014-12-03 The identity of computing has been fiercely debated throughout its short history Why is it still so hard to define computing as an academic discipline Is computing a scientific mathematical or engineering discipline By describing the mathematical engineering and scientific traditions of computing *The Science of Computing Shaping a Discipline* presents a rich picture of computing from the viewpoints of the field's

champions The book helps readers understand the debates about computing as a discipline It explains the context of computing's central debates and portrays a broad perspective of the discipline The book first looks at computing as a formal theoretical discipline that is in many ways similar to mathematics yet different in crucial ways It traces a number of discussions about the theoretical nature of computing from the field's intellectual origins in mathematical logic to modern views of the role of theory in computing The book then explores the debates about computing as an engineering discipline from the central technical innovations to the birth of the modern technical paradigm of computing to computing's arrival as a new technical profession to software engineering gradually becoming an academic discipline It presents arguments for and against the view of computing as engineering within the context of software production and analyzes the clash between the theoretical and practical mindsets The book concludes with the view of computing as a science in its own right not just as a tool for other sciences It covers the early identity debates of computing various views of computing as a science and some famous characterizations of the discipline It also addresses the experimental computer science debate the view of computing as a natural science and the algorithmization of sciences *Perspectives and Policies on ICT in Society* Jacques

Berleur,Chrisanthi Avgerou,2006-01-20 Governments the media the information technology industry and scientists publicly argue that information and communication technologies ICT will bring about an inevitable transition from industrial to information or knowledge based economies and societies It is assumed that all aspects of our economic and social lives in both the public and private spheres will be radically different from what they are today The World Summit on the Information Society Geneva 2003 Tunis 2005 shows the importance of a worldwide reflection on those topics *Perspectives and Policies on ICT in Society* explores the ICT policies of different nations and regions such as Africa China Europe and India The authors assess the arguments surrounding the impending new age as well as some of the more sensitive issues of its developments This progress will signal an expansion of ICT in many domains the so called ubiquity such as in the workplace the home government and education and it will affect privacy and professional ethics The expansion will also encompass all parts of the earth particularly developing countries Such growth must take place in the context of historical dimensions and should underscore the accountability of professionals in the field The intent of this book is to address these issues and to serve as a handbook of IFIP's TC9 Computers and Society committee Thirty authors from twelve countries consider the ICT policies with their associated perspectives and they explore what may be the information age and the digital society of tomorrow The book provides reflection on today's complex society and addresses the uncertain developments rising from an increasingly global and technologically connected world Jacques Berleur is at the University of Namur Belgium and Chrisanthi Avgerou at the London School of Economics United Kingdom Information Systems Development Chris Barry,Kieran Conboy,Michael Lang,Gregory Wojtkowski,Wita Wojtkowski,2008-10-24 Information Systems Development ISD progresses rapidly continually creating new challenges for the professionals involved New concepts approaches and techniques of systems development

emerge constantly in this field Progress in ISD comes from research as well as from practice This conference will discuss issues pertaining to information systems development ISD in the inter networked digital economy Participants will include researchers both experienced and novice from industry and academia as well as students and practitioners Themes will include methods and approaches for ISD ISD education philosophical ethical and sociological aspects of ISD as well as specialized tracks such as distributed software development ISD and knowledge management ISD and electronic business electronic government ISD in public sector organizations IOS
