Computers and Informatics in Developing Countries is a collection of papers documenting the conference of the Expert Group on Computers and Informatics for Development which investigates how the international scientific and development community can assist developing countries in using computer and informatics technology to promote progress and growth. The papers address the need for developing countries to formulate and apply computer and informatics policies for development as well as the role of an International Centre for Computers and Informatics (ICCI) should play in the development process. The ICCI should be based on the network principle that links other regional and national computer centers. The advantages of the network principle are lower startup costs, avoidance of setting up a large organization, and localized services of needs. An international organization similar to ICCI can accelerate Third World developmental efforts following the identification of needs of developing countries as regards computer and informatics, setting of clear objectives of ICCI and meeting with potential donors. The collection is suitable for heads of both non government agencies and government departments involved in international aid, education or development and also to administrators of educational institutions and philanthropic organizations.

ISO Standards for Computer Graphics The First Generation discusses the expected standards in the quality of computer graphics, the aspects and examples of said standards and the materials from the standards being described. The book is divided into six parts. Part 1 covers topics such as the applicability of first generation ISO standards, software architecture, application program interface, device interface, metafile, archive and language binding standards and the ISO and its related bodies. Part 2 deals with topics such as output primitives and attributes, coordinate systems and storage mechanisms. The third part talks about language bindings, encodings and formal specifications. The fourth part tackles validation and testing, conformance testing of graphic standards and the registration of graphical items. The book also discusses the status and future direction of ISO standards for computer graphics; it also presents in the last part the bibliography of the included topics, glossary on related bodies and the formal specification of a part of GKS. The text is recommended for computer engineers, IT experts and graphic designers who would like to know the ISO standards for computer graphics and its implications in their practice.

Computerization in Developing Countries Per Lind, 2018-03-26 Originally published in 1991 this book looks at the problems of applying Western computer programmes to the developing world arguing that the difficulties are as much cultural as technological The author shows that the underlying models for computer applications are made up from interpretations of reality which are closely related to Western scientific technological and cultural development originating from the Renaissance The book includes a case study of an Egyptian manufacturing company which reveals the actual problems encountered in the process of computerization

Information Technology In The Third World William James Stover, 2019-03-13 Mass media telecommunications and computer technology can effect change in poor countries but Third World leaders are often disappointed in the results Professor Stover looks closely at information technology and communication as agents of economic social and political development in Third World countries stressing that definitions of communication and development must include participation in the exchange of information and the attainment of humane values He examines reasons why the current world information order does not meet the needs of the Third World and argues that the major difficulty in achieving the potential of information technology for humane development is a cyclical pattern involving technology and values When countries acquire the physical means of communication their leaders are tempted to control them resulting in censorship that prevents genuine communication Breaking this cycle is a major requirement in using information technology for development and Dr Stover discusses how this may be accomplished practically in developmental Western and Soviet contexts
