Concept Mapping in Mathematics Karoline Afamasaga-Fuata'i, 2009-04-21 Concept Mapping in Mathematics Research into Practice is the first comprehensive book on concept mapping in mathematics. It provides the reader with an understanding of how the meta cognitive tool namely hierarchical concept maps and the process of concept mapping can be used innovatively and strategically to improve planning teaching learning and assessment at different educational levels. This collection of research articles examines the usefulness of concept maps in the educational setting with applications and examples ranging from primary grade classrooms through secondary mathematics to pre service teacher education undergraduate mathematics and post graduate mathematics education. A second meta cognitive tool called vee diagrams is also critically examined by two authors particularly its value in improving mathematical problem solving. Thematically the book flows from a historical development overview of concept mapping in the sciences to applications of concept mapping in mathematics by teachers and pre service teachers as a means of analyzing mathematics topics planning for instruction and designing assessment tasks including applications by school and university students as learning and review tools. This book provides case studies and resources that have been field tested with school and university students alike. The findings presented have implications for enriching mathematics learning and making problem solving more accessible and meaningful for students. The theoretical underpinnings of concept mapping and of the studies in the book include Ausubel's cognitive theory of meaningful learning constructivist and Vygotskian psychology to name a few. There is evidence particularly from international studies such as PISA and TIMSS and mathematics education research which suggest that students' mathematical literacy and problem solving skills can be enhanced through students collaborating and interacting as they work discuss and communicate mathematically. This book proposes the meta cognitive strategy of concept mapping as one viable means of promoting communicating and explicating students' mathematical thinking and reasoning publicly in a social setting e.g. mathematics classrooms as they engage in mathematical dialogues and discussions. Concept Mapping in Mathematics Research into Practice is of interest to researchers graduate students teacher educators and professionals in mathematics education.

Concept Mapping in the Middle School Mathematics Classroom Kerri A. Bell,2017 The purpose of the study was to examine the use of concept mapping in the middle school mathematics classroom in conjunction with a procedural task This mixed methods study used a concurrent nested design pulling complementary data from the artifacts to understand what students communicate through concept mapping The maps and task were qualitatively compared for similar information and were quantitatively analyzed for correlation The concept maps were evaluated for relational understandings levels of hierarchy and overall structure The instruments used to examine conceptual understanding were concept maps students created from a provided list of concepts and a procedural task that also served as an end of unit summative assessment for their course The concept maps were scored using a variation of a prominent structural method The concept maps were first analyzed for valid propositions Second the maps were analyzed for structural hierarchies and cross links Third the maps were reviewed for the presence of examples and definitions The maps were then compared to the procedural tasks and examined for similarities and extensions of communicated mathematical understandings The results of the study indicate that although the students in this study did not demonstrate an extension of their knowledge through concept mapping beyond the procedural task the concept maps contained a representation of their gaps in knowledge that could prove helpful for guiding classroom instruction and reteaching The study implies that teachers may find concept maps more effective for formative rather than for summative evaluations **The Creative Enterprise of Mathematics Teaching**

teaching an example of which is presented in the book Two central themes of the book are the methodology of TR NYCity model and creativity more precisely creativity of the Aha moment formulated by Arthur Koestler 1964 in a very profound but little known theory of bisociation exposed in his work The Act of Creation Incorporation of the theory of bisociation into classroom teaching of mathematics provides the key to enable students who may struggle with mathematics to engage their own creativity become involved in their learning process and thus reach their full potential of excellence Creativity in teaching remedial mathematics is teaching gifted students how to access their own giftedness

Vocabulary Development Timothy Rasinski, William Rupley, 2019-04-18 Knowledge of word meanings is critical to success in reading. A reader cannot fully understand a text in which the meaning to a significant number of words is unknown. Vocabulary knowledge has long been correlated with proficiency in reading. Yet national surveys of student vocabulary knowledge have demonstrated that student growth in vocabulary has been stagnant at best. This volume offers new insights into vocabulary knowledge and vocabulary teaching. Articles range from a presentation of theories of vocabulary that guide instruction to innovative methods and approaches for teaching vocabulary. Special emphasis is placed on teaching academic and disciplinary vocabulary that is critical to success in content area learning. Our hope for this volume is that it may spark a renewed interest in research into vocabulary and vocabulary instruction and move toward making vocabulary instruction an even more integral part of all literacy and disciplinary instruction.

Effects of integrated learning: explicating a mathematical concept in inquiry-based science camps Louise Bindel, 2018 Although various arguments for integrated learning of mathematics and science exist, empirical evidence that integrated learning is as beneficial as anticipated is limited. Therefore, this quasi-experimental study investigates the effect of integrated learning of mathematics and science on eight student variables by comparing it to a control group. Results show that integrated learning is no miracle cure but has positive and negative effects on specific student outcomes. Whereas integrated learning affects students' view of the relation between mathematics and science positively, it affects students' scientific self-concept negatively. Thus, integrated learning should not substitute but rather complement disciplinary learning.

Obwohl zahlreiche Argumente für das integrierte Lernen von Mathematik und Naturwissenschaften existieren, ist die vorteilhafte Wirkung integrierten Lernens begrenzt empirisch belegt. Im Rahmen dieser quasi-experimentellen Studie wird der Effekt integrierten Lernens auf acht Schülervariablen durch Vergleiche mit einer Kontrollgruppe untersucht. Die Ergebnisse zeigen, dass integriertes Lernen kein Allheilmittel ist, sondern positive und negative Effekte auf bestimmte Schülervariablen hat. Während integriertes Lernen die Sicht der Schülerinnen und Schüler auf die Beziehung zwischen Mathematik und Naturwissenschaften positiv beeinflusst, hat es einen negativen Effekt auf das naturwissenschaftliche Selbstkonzept. Daher sollte integriertes Lernen nicht stellvertretend, sondern ergänzend zu disziplinärem Lernen implementiert werden.

Making Connections Jordan Lacy Cook, 2012 Mathematics requires a vast foundational knowledge in order for students to be successful as they advance through the years. Often times it is common for teachers to teach these foundational skills over and over to ensure mastery prior to students' advancement. Given this fact, my capstone project was dedicated to increasing students' conceptual knowledge of mathematics.

through the use of concept mapping in the classroom This project spanned a total of four math investigations with two of the investigations taught using concept mapping in addition to the regular curriculum Data collected to identify the effects of mapping on conceptual understanding long term memory motivation and teacher professionalism included preunit postunit and delayed assessments interviews journal entries surveys and the concept maps themselves The results of the study were mixed Concept mapping had positive impact on conceptual understanding in general Data also indicate that mapping within the classroom increased student motivation Finally the results indicate that concept mapping had a positive impact on my goals as a teacher and my professionalism within the community *Teaching Secondary Mathematics With Ict*
