GIS and GeoComputation Peter Atkinson, 2000-06-21 Geographic Information Systems are computer based systems for geographic analysis They have been developed over the past twenty five years and are now widely used A recent research direction has been the development of geocomputation representing computer based geographical analysis beyond the traditional bounds of GIS In geocomputation the computer is the research

environment itself not merely a tool A key to geocomputation is that highly powered computing can be used with sufficient data to avoid traditional parametric approaches altogether The term geocomputation includes the use of computer based techniques such as artificial neural networks genetic programming and fuzzy logic but in a geographical context This new book in the prestigious Innovations in GIS series presents the latest research in geocomputational techniques as presented in the GIS UK Annual Conference Foundations of Geographic Information Science Matt Duckham, Michael F.
